

The Center for the Advancement of Teaching at John Jay College and Turning Technologies Present:

Engaging Students with Technology: Clickers in the Classroom and Beyond

Student Response Systems, or “clickers,” are becoming more and more popular on college campuses, including John Jay. Join us to learn about the ways in which clickers are being used as an effective tool in student engagement and performance.

The Center for the Advancement of Teaching and Turning Technologies is sponsoring two presentations facilitated by Dr. Glass of Rutgers University. In addition, you may also “drop-in” to get information on the pedagogical “best practices” developed by Dr. Glass, as well as information on using “clickers” as a teaching tool from a Turning Technologies representative. Refreshments will be served. Seating is limited.

Special Guest Speaker: Dr. Arnold Glass, Rutgers University

Dr. Glass is a professor of Psychology and a Turning Technologies Distinguished Educator who has been integrating clickers with instruction for several years. Dr. Glass is an advocate for clicker use and has published research on clickers as tools for learning.

When: Wednesday, May 4th, 2011

Where: Center for Advancement of Teaching (CAT) - 333-T

Times:

| | |
|-----------------|---------------------|
