Fire Safety/Emergency Action Plan
Director On-Site Examination (F-59)
Study Material

- The newly updated test reflecting the changes in this study material will be started on 02/02/2015.
- It is recommended that this guide be kept at all times at the Fire Command Center.

*This publication is provided FREE to the public by the FDNY.*

© 1/2015 New York City Fire Department - All rights reserved.
It has been more than 7 years since the inception of the Emergency Action Plan Director Certification program. The program has been highly successful and recognized throughout the country.

We recognize the positive aspects of the current program; however, we recognize the necessity of upgrading safety by implementing this new test. Therefore, we are adopting new, important concepts including alternative actions. The FDNY has created categories for each of these. They are “recommended”, “acceptable” and “unacceptable”. These categories are found in this study guide, and frame many possible emergency action scenarios.

Currently, any proposed course of action is accepted to pass the EAP test; however, it is obvious that some actions will are better than others. There are also certain actions which are predictably harmful.

We also recognize that actions to be taken in the affected areas that experience the immediate impact/effect by the threat may differ from the rest of the building depending upon circumstances of the threat. The old test treated the building as a whole. It will enhance safety by understanding that different actions may be more or less appropriate under varying circumstances.

The Fire Safety Director On-Site Examination includes questions on the following topic areas:

Part I. Building Knowledge

Part II. Fire Command Center & Elevator Demonstration

Part III. Non-Fire Emergency Scenarios

Part IV. Knowledge of Training Requirement
Table of Contents

STUDY MATERIAL AND EXAM DESCRIPTION ............................................................................. 1
INTRODUCTION AND HISTORICAL EVENTS ........................................................................ 7
DEFINITION ............................................................................................................................................ 13

PART I. BUILDING KNOWLEDGE .................................................................................................. 16
1 The Information from the Building Information Card ....................................................... 17
2 The Information from the Building Emergency Action Plan ........................................... 19
3 Other information about the building operation .............................................................. 23

Part II. FIRE COMMAND CENTER & ELEVATOR DEMONSTRATION ........................................ 24
1 Staff identification donning of apparel ................................................................................... 24
2 Performs all appropriate announcements ............................................................................. 24
3 Performs all appropriate communications ........................................................................... 24
4 Performs elevator recall procedures ...................................................................................... 25
5 Provide other required information ....................................................................................... 26
6 Mandatory failures .................................................................................................................. 26

Part III. Non-Fire Emergency Scenarios ................................................................................... 27

EAP ACTIONS ......................................................................................................................................... 27

Four EAP actions for different areas and different emergency scenarios............................ 29
1 Emergency Actions for Biological Incident or Release ...................................................... 30
  1.1 Biological agent released outside the building impacting the immediate area .......... 30
  1.2 Biological agent released inside the building (in a confined area only) ...................... 31
  1.3 Biological agent released inside the building, and possibly contaminates multiple floors (e.g. someone carried the agent to multiple floors) .......... 33
2 Emergency Actions for Chemical Incident or Release ......................................................... 34
  2.1 Chemical agent released outside the building impacting the immediate area .......... 34
  2.2 Chemical agent released inside the building ................................................................. 35
3 Emergency Actions for Carbon Monoxide/Natural Gas Leak ............................................. 36
  3.1 Carbon Monoxide/Natural Gas Leak found outside the building impacting the immediate area .................................................................................................................. 36
  3.2 Carbon Monoxide/Natural Gas Leak found inside the building (in a specific floor/area only) .................................................................................................................. 37
  3.3 Carbon Monoxide/Natural Gas Leak found inside the building (throughout the building) .................................................................................................................. 39
4 Emergency Actions for Explosion ................................................................. 39
  4.1 An explosion happened directly outside the building impacting the immediate area 39
  4.2 An explosion happened inside the building .............................................. 41
5 Emergency Actions for a Suspicious (Unattended) Package ...................... 42
  5.1 A suspicious package is reported to be located directly outside the building impacting the immediate area ................................................................. 42
  5.2 A suspicious package is reported inside the building .............................. 44
6 Emergency Actions for Civil Disturbances (outside the building) .......... 45
7 Emergency Actions for Building Utilities Failure ...................................... 46
8 Emergency Actions for a Building with Physical Damage/Structural Failure.. 46
  8.1 The building has minor physical damage (such as broken windows), and the damage is in some specific areas that will NOT lead to building collapse. ......................... 46
  8.2 The building has possible severe structural failure (such as a major wall breakdown) or the damages are within multiple floors/large areas that may lead to building collapse ................................................................................................................... 47
9 Emergency Actions for Natural Disasters ............................................... 49
  9.1 Natural disaster and the building structure is not compromised............. 49
  9.2 A natural disaster causing minor building physical damage (such as broken windows), which will NOT cause the building to collapse ......................................................... 50
  9.3 A natural disaster which caused major building structural failure that may cause building collapse ................................................................................................. 51
  9.4 Building power failure which is caused by a natural disaster ............... 52
  9.5 The building affected by flooding caused by a natural disaster ............ 52
10 Emergency Actions for Active Shooter Events ...................................... 54
  10.1 Introduction ............................................................................................... 54
  10.2 Active shooter emergency .................................................................... 55
    10.2.1 Active shooter outside the building .................................................... 55
    10.2.2 Active shooter inside the building ..................................................... 56
  10.3 How to respond when law enforcement arrives .................................. 58
Table 1-1. RECOMMENDED EAP actions for different scenarios .................. 60
Table 1-2. RECOMMENDED EAP actions for natural disasters .................... 61
Table 1-3. RECOMMENDED EAP actions for active shooter emergency .... 61
Table 2-1. ACCEPTABLE EAP actions for different scenarios ..................... 62
Table 2-2. ACCEPTABLE EAP actions for natural disasters ......................... 62
Table 3-1. UNACCEPTABLE EAP actions for different scenarios ............... 63
Table 3-2. UNACCEPTABLE EAP actions for natural disasters .................... 64
Table 1-3. UNACCEPTABLE EAP actions for active shooter emergency .................. 64
1 General Instruction of the Training Session ......................................................... 65
2 Training the Eap Staff Members ........................................................................ 65
  2.1 Same information must be learned by all EAP staff members ..................... 66
      (1) A general overview of the building’s EAP: ............................................. 66
      (2) Four EAP actions: .............................................................................. 67
  2.2 Different training content for different EAP staff members ......................... 68
      I. Deputy FS/EAP directors; ................................................................. 68
      II. EAP building evacuation supervisor ................................................. 68
      III. EAP wardens .................................................................................... 69
      IV. Deputy EAP wardens ........................................................................ 70
      V. EAP brigade members ........................................................................ 71
3 Preparation and Training for an Active Shooter Situation ............................. 71

Appendix I. Official Bibliography (Computer Based Exam and On-Site Exam) ...... 75
STUDY MATERIAL AND EXAM DESCRIPTION

About the Study Material
This study guide is intended to introduce the Fire Safety/Emergency Action Plan Director (FS/EAP Director) applicant to the topic areas that will be covered on the FS/EAP Director Certificate of Fitness On-Site Examination. It is just a general overview of the topic areas and is not intended to be a comprehensive guide during an emergency. The applicant must conduct additional research for his or her own building components and obtain additional study materials to prepare for the exam. Additional materials could be referred to the official bibliography for the F-59 Exam listed in the Appendix I.

This study guide includes information taken from the New York City Fire Code and Fire Rules. The study guide does not contain all the information the applicant is required to know in order to work efficiently and safely during an emergency. It is the applicant’s responsibility to become familiar with all applicable laws, rules and regulations of the federal, state and city agencies having jurisdiction in his or her premises/property, even though such requirements are not included in this study guide. The applicant needs to be familiar with the applicable sections of the New York City Fire Code and Fire Rules and the materials listed in the Appendix I in order to adequately prepare for the exam. You must also be able to understand and apply the rules and procedures contained in this study guide to help increase the chances of receiving a passing score.

This study guide or any other study materials or personal notes are NOT allowed during the FS/EAP Director On-Site Exam.

About the On-Site Exam
(1) Schedule the On-Site exam
A candidate’s supervisor, building manager or property owner must submit the request to schedule an On-Site FS/EAP Director Exam. Candidates cannot schedule their own exams. To qualify for the FS/EAP Director On-Site Exam, all the following condition must be met:

(1) The candidate must pass the FDNY FS/EAP Director certificate of fitness computer based exam (Z-59 exam) and receive the FDNY letter of passing the Z-59 exam.

(2) The building’s Comprehensive Fire Safety and Emergency Action Plan is accepted by the FDNY.

The first attempt of the On-Site exam should be scheduled within a 6 month period from the date that the candidate receives the FDNY Z-59 letter indicating a passing grade. In addition, any other appointment for scheduling the On-Site exam must be requested within a one (1) year period from the date that the
candidate receives the FDNY Z-59 letter indicating a passing grade. **This letter is NOT RENEWABLE.**

The supervisor or the building manager or property owner should request the On-Site Exam appointment through the following link providing that the building has a current FDNY approved Fire Safety and Evacuation Plan on file:

http://www1.nyc.gov/nyc-resources/service/1602/emergency-action-plan-eap-director-on-site-test

No telephone, email or fax appointment requests will be accepted.

In the case of hardship, an emergency overtime test Monday to Friday after 5:00 PM or on Saturday can be requested. Additional overtime expenses will be charged.

Applicants are allowed to be certified at 2 separate locations at one time without special restrictions. Applicants that work in 3 or more locations must apply for a modification/variance. A $200 non-refundable fee is required with each application Email pubcert@fdny.nyc.gov for further info about multiple (more than 2) certifications. Applicants participating in the variance program are required to retake an On-Site Exam at each premises in order to renew COFs.

(2) **Cancel the On-Site Exam**

All requests for cancellations shall be submitted via email only to High-Rise@fdny.nyc.gov. Please note “Request for Cancellation” in the subject of the email and provide all the pertinent information regarding the candidate in the email so that the cancellation can be expedited. The building will be charged the On-Site test fee if cancelled less than 72 hours prior to the On-Site Exam. **Any candidate canceling three (3) On-Site exams will not be allowed to schedule an On-Site exam until after 6 months following the third cancellation.**

If the supervisor or the building manager needs to reschedule the candidate, the cancellation must be submitted. After the cancellation is confirmed by the High Rise Unit, the supervisor or the building manager could schedule the On-Site Exam again. Requests to reschedule the On-Site exam must be 7 to 10 business days after cancellation.

(3) **On-Site Exam environment**

In order to maximize the candidate’s testing performance, the candidate or the supervisor must arrange a suitable environment for the FDNY inspector to administer the On-Site Exam.

A suitable testing environment includes but is not limited to:

- adequate room lighting
- adequate ventilation
- comfortable seating and clean work surfaces for the candidate to take notes and answer the questions.
- minimum noise and no distractions during testing
- alarms and announcements will be sounded at various points during this Exam, refer to “(4) During the FS/EAP Director On-Site Exam”.

The average testing time of the On-Site Exam is approximately 2.5 hours. The testing environment should be expected to be occupied for at least 2.5 hours. FDNY inspectors have the right to move the candidate to a proper testing environment.

(4) During the FS/EAP Director On-Site Exam

Before the On-Site Exam, the most recent EAP plan must be available to the FDNY inspector, including:

- Building Information Card (BIC);
- Fire Safety and Evacuation Plan and;

The candidate also needs to present to the FDNY inspector a valid F-58 or F-25 Certificate of Fitness for the same address where the Fire Safety and Emergency Action Plan On-Site is being conducted. Failure to produce the required documents prior to the On-Site Exam can result in termination of the exam. The On-Site exam fee will be charged.

The On-Site Exam is to be conducted between the inspector and the candidate ONLY. However, in order to demonstrate the required skills in the second part of the On Site Exam, there should be at least another EAP staff/the building critical operational staff (e.g. EAP brigade member, EAP floor warden, FSD) on the premises. The inspector will give a specific instruction to the staff stating the assistance he/she should provide. The building staff must not assist any action other than the inspector’s instruction during the On Site Exam.

The FS/EAP Director On-Site exam is an oral and practical test. For the oral test, the candidate will be required to answer various questions, which are referenced in this study material; however, no study materials or personal/outside notes are allowed at any time during the On-Site Exam.

The FS/EAP Director On-Site Exam contains the following parts:

- Part I. Building Knowledge
- Part II. Fire Command Center & Elevator Demonstration
- Part III. Non-Fire Emergency Scenarios
- Part IV. Knowledge of Training Requirements

In the first session of the On-Site exam, the candidate will be required to answer site specific questions related to the building operation.

In the second session of the On-Site exam, the candidate will also be directed to practically demonstrate how the Fire Command Center operates and how to operate an elevator in Phase I service mode and Independent mode. The candidate is required to secure the appropriate approvals from the building’s management before the Inspector arrives to administer the exam.
The building’s management must allow the candidate to demonstrate the required skills, including but not limited to the following:

1. Manually activate the fire alarm tone;
2. Perform the announcement to the occupants;
3. Perform the communication with the EAP staff and the building critical operational staff;
4. Perform the Phase I and Independent Mode elevator operation.

If the building’s management prohibits the candidate from demonstrating the required skills, the exam will be terminated. The failure will be designated to be a building failure and will not count as a failing score pertaining to the candidate, but the On-Site exam fee will be charged.

The candidate must instruct building employees who are posted at or near the Fire Command Center to remain silent while he/she is answering questions or demonstrating the required skills. If any other person answers questions that the candidate is required to answer, instructs the candidate on how to perform the required skills or interferes with the exam in any manner, the candidate will NOT receive credit for those questions.

In the third session of the On-Site exam, the candidate will be presented with a specific non-fire emergency scenario and directed to state the actions that the candidate would take should this scenario occur. The inspector will read each part of the scenario and then wait for the candidate’s responses before proceeding to the subsequent parts of the scenario. The candidate is allowed to take notes while the inspector is reading the scenario. Inspectors will provide paper for the candidate to take notes. The candidate will be directed by the inspector as to which sections are allowed for notes taking. The candidate will be given approximately 7 minutes to prepare his/her responses on the note that the inspector provides. After the preparation time, the candidate must verbally state his/her answers in order to receive credit. The inspector will repeat the scenario at the candidate’s request.

When stating answers, the candidate should state all the actions that are required to be taken. The candidate must be as specific as possible and must not assume that actions were taken by others. Candidates should explain all their actions in detail from the beginning of the incident/emergency to the very end. The inspector may ask the candidate to restate and/or explain the given answers. The candidate must inform the inspector when he/she is satisfied with the answers provided and is finished stating all of the complete answers. The candidate must return the notes to the inspector when the scenario is completed.

In the fourth session of the On-Site exam, The candidate is required to demonstrate his/her ability to train a staff member as part of the On-Site Exam. During the On-Site Exam, the candidate will be required to present initial training for one of the following staff members: (1) deputy FS/EAP directors; (2) FS/EAP building evacuation supervisors; (3) FS/EAP floor wardens; (4) deputy EAP floor wardens; (5) EAP brigade members. The staff member(s) will be designated by the inspector upon this test segment.
(5) **On-Site Exam Grading**

Different weightings are assigned for different questions. For example, there are mandatory questions and important questions in the On-Site exam. **All candidates must receive a score of at least 70% and pass all mandatory questions.** The applicants will retain their current FSD (F-58 or F-25) while certified as an FS/EAP Director. If the candidate does not pass any mandatory question or failed two important questions, the candidate will **NOT receive a passing score.** The mandatory questions in the FS/EAP On-Site exam are building specific questions where a practical demonstration will be required. The important questions are generic questions for the actions that must be explained as part of the answer to a question or scenario.

The inspectors only record the candidate’s VERBAL answers but do not grade the exams. The On-Site exam will be graded by a third party unit at the FDNY. If you feel the examiner did not provide a fair opportunity, you may file a complaint by email. We assure that all complaints will be kept confidential.

Your complaints and/or concerns regarding the administration of the On-Site exam must be:

- received by email **within 24 hours of your On-Site exam**
- address your complaints to **pubcert@fdny.nyc.gov**
- subject line of **FS/EAP Director Onsite Complaint**
- In the body of the email please include
  1. Your full name
  2. Your Social Security number
  3. The date the On-Site Exam occurred
  4. Describe the specific issue in detail

The grading processing may take from six (6) to eight (8) weeks. The exam results will be mailed to the candidate’s home address as indicated on the A-20 application filled out during the On-Site exam. If the candidate fails, the failure notices will also be mailed to the Building’s manager.

(6) **The Consequence of Failing the On-Site Exam**

If the candidate fails the On-Site exam, the fee will not be refunded. Applicants will be permitted to take two (2) On-Site Exams; however, applications for a second On-Site Exam must be filed within the one (1) year valid period from the date the candidate passed the computer based exam.

If the candidate does not pass the examination after the second attempt, the candidate will be **required to start the application process from the beginning** by retaking the Fire Safety/Emergency Action Plan Director course and retaking the Z-59 Certificate of Fitness computer based examination.
Renewal Information

This Certificate of Fitness must be renewed every **THREE YEARS.** Remember to RENEW TWO C of Fs, FSD AND FS/EAP C of Fs, upon their renewals. A Fire Safety/Emergency Action Plan Director (F-59 C of F holder) must maintain **TWO valid Certificate of Finesses,** the F-58/F-25 (Fire Safety Director) C of F AND the F-59 (FS/EAP Director) C of F, for the same premises. Holding a valid F-59 C of F but without renewing the F-58/F-25 C of F is not qualified to serve as an FS/EAP Director.

Refer to the Notice of Exam for other detail:
INTRODUCTION AND HISTORICAL EVENTS

Based on Local Law 26 of 2004, RCNY 3 §6-02 of 2006 was adopted. The Fire Rule requires that the owner of each office building or occupancy required to have an Emergency Action Plan (EAP) should also designate a Fire Safety/Emergency Action Plan (FS/EAP) Director.

The Rule 6-02 mandates that the owner of a building subject to its requirements be fully prepared to respond to non-fire emergencies. The owner must ensure the development of training and drills as well as procedures for sheltering occupants in place, relocating occupants within the building and implementing partial and full evacuation. The Rule establishes specific requirements as to the form and content of the EAP. It requires the FS/EAP Director be authorized to implement the EAP.

Most of the time, emergency officials will be on the scene to assume responsibility for making the emergency action decisions; however, there may be situations that cause response of emergency personnel to be delayed or prevented. In that case, the responsibility and authority to choose the proper EAP action rests with the FS/EAP Director. The decision of the action(s) shall be based on an analysis of circumstances (i.e. consulting with the EAP brigade members and gathering information from the building occupants, media or local authorities) as to which such action would best ensure the safety of the building and its occupants.

The most general concern is whether there was an event that already compromised the integrity of the building systems and the safety of its occupants, or if there is the potential for one to occur. As previously mentioned, FS/EAP On-Site test credits the candidates for four types of EAP actions (shelter in place, in-building relocation, partial evacuation and full evacuation); however, based on the real life emergency situations that have occurred in the past few years, the Fire Department recognizes that not all EAP actions are suitable for every situation. Some improper actions may cause more injuries or damages. As a result, this booklet is designed to provide general guidance for the FS/EAP Director to select the immediate actions based on different emergencies BEFORE the emergency personnel arrive at the scene or provide instructions. The study guide’s purpose is to provide a framework for acceptable courses of action in non-fire emergency situations. It is NOT the purpose to provide unbending, absolute rules for situations in which there are a great many variables.
The following real life emergencies provide a discussion of the proper actions that the FDNY recommends and improper actions that an FS/EAP Director should avoid.

**Compliance with orders of lawful authorities.**
The owner, fire safety/EAP Director and all other EAP staff and building occupants **shall comply with the orders of the Fire Department or other incident commander or emergency response personnel** should such incident commander or emergency response personnel be present at the building.
Real life emergency I: Natural gas leaked and exploded indoors
(New York, NY)

On 3/12/2014, Con Edison received a call from a resident at a building in East Harlem reporting a (natural) gas leak around 9:13 a.m. Seventeen minutes later, the gas leak led to an explosion and knocked down two 5-story buildings. The accident killed at least eight people and injured at least 70 others.

If a natural gas leak occurs in a building requiring an EAP plan, what actions should the building's FS/EAP Director both take and avoid?

Natural gas leaks have caused deadly catastrophes. If an explosion occurs, the whole building may collapse, implementing a shelter in place or an in-building relocation will not save the occupants from injuries. The FDNY strongly recommends that once a suspected carbon monoxide or natural gas line leak throughout the building is reported, the FS/EAP Director should fully evacuate the whole building through a safe exit and follow the authority’s (e.g. FDNY) instructions for the further actions.
A smell of natural gas and white smoke began coming out of manholes on streets on 7/31/2014 at 8:46 p.m., and a series of explosions started around midnight. The blasts ripped up roads, trapped and overturned cars and fire trucks, and caused a blackout to the electrical grid. About 10 miles of road length were damaged. The explosions reportedly blew cars high up in the air; some vehicles and victims were found at the rooftops of buildings three or four stories high. Thirty one people were killed and 309 others were injured.

If a natural gas leak occurs outside a building requiring an EAP plan, what actions should the building’s FS/EAP Director both take and avoid?

If a natural gas leak occurs in the immediate area of the building, sheltering the occupants in or near the affected area (e.g. lobby, window areas) may expose them to a higher risk of injuries. The occupants may be injured from the shattering glass and other debris. The FDNY highly recommends the FS/EAP Director to move the occupants out of the affected area to a safe in-building relocation area. In addition, all the occupants should be warned to avoid the location affected by the natural gas leak.
Real life emergency III: Bomb exploded outdoors (Boston, MA)

On 04/15/2013, two pressure cooker bombs exploded during the Boston Marathon at 2:49 pm EDT, killing 3 people and injuring an estimated 264 others.

*If a bomb explosion happens outside a building requiring an EAP plan, what actions should the building’s FS/EAP Director both take and avoid?*

If a bomb explosion happened in the immediate area of the building, sheltering the occupants in place of the affected area (e.g. lobby or window areas) will expose them to a higher risk of injuries. For example, occupants may get injured from the debris or there might be a second explosion that causes more damage. The FDNY highly recommends the FS/EAP Director relocate the occupants to safe areas within the building.
On 8/28/2014, an SUV drove into a hair salon in a historic building, injuring seven people. The structural integrity of the historic building may be compromised after a concrete support pillar was demolished.

*If a crash happens to a building requiring an EAP plan, what actions should the building’s FS/EAP Director take and avoid?*

The car crash may cause a collapse of the building. In this case, sheltering in place will put the building occupants in great danger. The FDNY highly recommends that the FS/EAP Director implement a full evacuation if the whole building is considered to be compromised.
DEFINITION

ACTIVE SHOOTER. An individual actively engaged in killing or attempting to kill people in a confined and populated area. Active shooters use firearms, explosives, fire, or other deadly weapons and there is often no pattern of method to their selection of victims.

AFFECTED AREA (as defined for testing purposes). The area(s) that may be in close proximity to the threat/incident and experience the immediate impact of the threat/incident.

ASSEMBLY AREA. A designated outdoor area to which building occupants are directed to report upon implementation of a partial evacuation or evacuation in accordance with a fire safety and evacuation plan or an emergency action plan.

BUILDING OCCUPANTS. All persons in the building, including employees, building personnel and visitors.

CRITICAL OPERATIONS STAFF. Building personnel or other building occupants designated to remain after the emergency action plan is implemented to perform or shut down critical operations, or perform essential services, before they shelter in place, relocate in building or evacuate.

DEPUTY FIRE SAFETY/EAP DIRECTOR. One (1) or more employees designated by the owner as qualified and trained to perform the duties of such position in accordance with the requirements of this section and R404-02, and who possesses the requisite qualifications and training, as set forth in R113-03.

EAP DRILL. A training exercise by which building occupants are familiarized with and/or practice the procedures for safe, orderly and expeditious sheltering in place, in-building relocation, partial evacuation or evacuation, in accordance with the emergency action plan, and to evaluate the efficiency and effectiveness of the implementation of such plan.

EAP STAFF. The individuals identified in an emergency action plan as responsible for the implementation of such plan, including but not limited to the fire safety/EAP director, deputy fire safety/EAP director, EAP building evacuation supervisor, EAP wardens, deputy EAP wardens, EAP searchers, members of the EAP brigade and critical operation staff.

EMERGENCY. An incident involving an explosion, a biological, chemical, radiological, nuclear or other chemical incident or release, natural disaster, or the threat thereof, or a declaration of emergency by a lawful authority, that requires implementation of a building’s emergency action plan to help ensure the safety of the building occupants.

EMERGENCY ACTION PLAN (EAP). A written plan which sets forth the circumstances and procedures for the sheltering in place, in-building relocation, partial evacuation or evacuation of building occupants in response to an incident involving an explosion, a biological, chemical or nuclear incident or release, natural disaster or other emergency, or the threat thereof, or a declaration of emergency by a lawful authority.
EVACUATION. The emptying of a building of all building occupants in response to a fire or an emergency.

FIRE DRILL. A training exercise by which building occupants are familiarized with and/or practice the procedures for the safe, orderly and expeditious in-building relocation, partial evacuation or evacuation, as applicable to the occupancy or building type, in accordance with the fire safety and evacuation plan, and to evaluate the efficiency and effectiveness of the implementation of such plan.

FIRE SAFETY AND EVACUATION PLAN. A written plan which sets forth the circumstances and procedures for the in-building relocation, partial evacuation or evacuation of building occupants, required or as appropriate for such occupancy or building type, in response to a fire.

FIRE SAFETY/EAP DIRECTOR. The employee designated by the owner to perform duties of such position in accordance with the requirements of this section and R404-02, and who possesses the requisite qualifications and training, as set forth in R113-03.

FSP STAFF. The individuals identified in a fire safety and evacuation plan as responsible for the implementation of such plan.

HOSTAGE SITUATION. A hostage situation begins the moment a suspect takes a person (or some people) under his or her control and subjects that person(s) to the risk of bodily harm for the purpose of furthering a criminal act or facilitating an escape.

IN-BUILDING RELOCATION. The controlled movement of building occupants from an endangered area of a building to an in-building relocation area within the same building in response to a fire or an emergency.

IN-BUILDING RELOCATION AREA. A designated indoor area to which building occupants may be relocated in accordance with a fire safety and evacuation plan or an emergency action plan.

NEIGHBORING BUILDINGS. Buildings subject to the provisions of this section that are located on either side of a city street, up to a distance of 200 feet apart, unless separated by a barrier to movement, such as a restricted access roadway or railway.

OFFICE BUILDING. A group B occupancy designed and arranged to provide offices and other areas for the conduct of business ordinarily conducted in offices.

OWNER. The fee owner or lessee of the building, or other person or entity having charge thereof.

PARTIAL EVACUATION. The emptying of a building of some but not all building occupants in response to a fire or an emergency.

REGULAR BUSINESS HOURS. Times of day and days of the week during which a building or occupancy is normally occupied and business is conducted, and any time when an office building is occupied by more than 500 persons on one or more floors, including street level, or by more than 100 persons on one or more floors other than street level.

REST OF THE BUILDING (as defined for testing purposes). The area(s) other than the affected area.
**SHELTER IN PLACE.** The precaution of directing building occupants to remain inside the building, at their present location, in response to a fire or an emergency.

**UNDERGROUND BUILDING.** A building or part thereof having a floor level for human use or occupancy more than 30 feet (9144 mm) below the lowest level of exit discharge, as that term is defined in the Building Code.
PART I. BUILDING KNOWLEDGE

Candidates will be required to answer site specific questions regarding the following topics:

1. The information from the Building Information Card:
   (1) Building Information
   (2) Building Statistics
   (3) Stairways
   (4) Elevators
   (5) Ventilation
   (6) Utilities
   (7) Fire Protection systems
   (8) Hazardous Materials
   (9) Communications

2. The information from the Emergency Action Plan of the candidate’s building:
   (1) EAP Staff
   (2) In-Building Relocation
   (3) Primary/Alternate Routes

3. Other information about the building operation.

The answers given in Part 1 are scored based on the Building Information Card (BIC) and the building Emergency Action Plan. If the candidate knows there is any change in the BIC or the EAP, the candidate must inform the inspector before the On Site Exam begins.
## The Information from the Building Information Card

The Information from the Building Emergency Action Plan

(1) Regarding EAP staff members

The candidate should know the three EAP staff members (or their designees) required to be on the Brigade (titles & name).

- Property Manager & name
- Director of Security & name
- Chief Engineer & name

The information could be found in the building Emergency Action Plan, Appendix A, table 3

Example:

<table>
<thead>
<tr>
<th>EAP Assignment</th>
<th>Name</th>
<th>Title</th>
<th>Regular Days and Hours of Work (e.g., M-F 9am–5pm)</th>
<th>Work Location Telephone No.</th>
<th>Other Contact Information (e.g., mobile number, email address)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The candidate should know the titles of staff members that will assess the following building components:

- Entrances/Exits & Stairway safety.
- Elevator safety.
- Utilities & Fuel Oil systems.
- HVAC.
The information could be found in the building Emergency Action Plan, Appendix A, table 7

Example:

### Combined Fire Safety/Emergency Action Plan (Appendix A-2)

#### Table 7

1. **Access to and egress from entrances/exits and stairways:**

<table>
<thead>
<tr>
<th>Building Entrances/Exits</th>
<th>EAP Staff Member's Title</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Stairways</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Location Designation</td>
<td>EAP Staff Member's Title</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. **Elevator Operations**

<table>
<thead>
<tr>
<th>Elevator Bank and Car Number (i.e. Bank A, Cars 1 through 6)</th>
<th>EAP Staff Member's Title</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. **Fuel oil storage systems and associated pumps and piping, and electrical, natural gas, steam and other utility operations:**

<table>
<thead>
<tr>
<th>Utility</th>
<th>EAP Staff Member's Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuel Oil:</td>
<td></td>
</tr>
<tr>
<td>Electrical:</td>
<td></td>
</tr>
<tr>
<td>Natural Gas:</td>
<td></td>
</tr>
<tr>
<td>Steam:</td>
<td></td>
</tr>
<tr>
<td>Other Utility:</td>
<td></td>
</tr>
</tbody>
</table>
(2) Regarding In-Building Relocation
The candidate should know as follows:
- The types of spaces used for In-Building Relocation (IBR).
- If there is an IBR area on each floor.
- If a floor does not have an IBR area, what staircase will be utilized to reach their IBR area?

The information could be found in the building Emergency Action Plan, Appendix A, table 8

Example:

(3) Primary/Alternate Routes and Assembly Areas
The candidate should know the primary/alternate evacuation routes.
The information could be found in the building Emergency Action Plan, Appendix A, table 9

Example:

![Combined Fire Safety/Emergency Action Plan (Appendix A-2) Table 9]

**SPECIFIC EVACUATION ROUTES FOR EAP**

<table>
<thead>
<tr>
<th>Floor Number</th>
<th>Exit Routes (e.g. Hallways)</th>
<th>Stairwell Letter Terminals</th>
<th>Elevator Bank Terminals</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Alternate</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The candidate should know:
- The primary/alternate assembly areas.
- The methods used to account for the occupants, after movement. Also how and by whom it will be communicated back to the FS/EAPD.

The information could be found in the building Emergency Action Plan, Appendix A, table 10

Example:

![Combined Fire Safety/Emergency Action Plan (Appendix A-2) Table 10]

**OUTSIDE OF BUILDING ASSEMBLY AREAS FOR EAP**

<table>
<thead>
<tr>
<th>Assembly Area #</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distance from building to assembly area [ft]</td>
<td></td>
</tr>
<tr>
<td>Maximum number of persons that assembly area accommodates</td>
<td></td>
</tr>
<tr>
<td>Employer(s)</td>
<td></td>
</tr>
<tr>
<td>Employer(s) procedures to account for building occupants, and how such information will be communicated back to the fire command center:</td>
<td></td>
</tr>
</tbody>
</table>
3 Other information about the building operation

The candidate needs to know the following information about his/her building:

- The regular business hours of the building. (as indicated in the plan)
- If there are scissor stairs in the building.
- Elevators that possess two-way communication.
- The title of the staff member who will operate the elevators in Manual / Independent mode.
- If there are any day tanks within the building, capacity & location.
- If the building has Steam &/or Natural Gas Service.
  - The location of entry into the building & the location of the shut-offs.
- If there is any uninterruptible power supply (UPS) battery system and/or Energy Storage System (EES) in the building.
  - The location(s) of the battery system(s)
- What fail-safe & door release equipment exists in the building and the floors they serve.
- Alternate site for command (If the Fire Command Center is compromised).
Part II. FIRE COMMAND CENTER & ELEVATOR DEMONSTRATION

The candidate will be required to demonstrate the following skills that should be performed upon implementation of the Fire Safety/Emergency Action Plan:

- Staff identification don apparel (Puts on clothing or outerwear identifying his/her official role)
- Performs all appropriate announcements
- Performs all appropriate communications
- Performs elevator recall procedures
- Provides other required information

1 Staff identification donning of apparel

Upon the demonstration session of the FS/EAP On-Site Exam, the candidate shall identify him/herself as a FS/EAP director to the inspector and others by donning a vest, armband, hat or other form of identification indicating his/her role. The candidate WILL NOT BE REMINDED or TOLD by the inspector to don his/her staff identification apparel.

2 Performs all appropriate announcements

Candidates will be required to demonstrate proficiency in the following areas:

- Ability to identify and explain all components of the Fire Command Station
- Make All Call announcement including the stairways.
- Make localized announcement.
- Manual Activation of Alert Tone or Alarm Tone.
- Simulate fail-safe door release.
- Communicate via Warden Phone.

3 Performs all appropriate communications

Candidates will be required to demonstrate both the primary and alternate way to communicate to:

- EAP staff.
- Building occupants.
- Building critical operation staff.

The information could be referred to the building Emergency Action Plan, Appendix A, table 7, in subsection 5.

Example:
4 Performs elevator recall procedures

The applicant will be required to demonstrate proficiency in the following elevator procedures:

- Recall an elevator bank using Fireman Service Key to utilize the Phase I emergency elevator recall.
- A car designated in your EAP shall be placed in the Independent Mode (NOT PHASE II).

- Manually operate a designated elevator car in the Independent Mode including the following:
  - closing the elevator door,
  - moving the elevator to the designated floor,

- Two-way communications between FCS and elevator car:
  - acknowledging the call from the occupants in the elevator,
  - initiating communication with occupants inside the elevator.
5 Provide other required information

(1) Providing list of occupants in need of assistance
(2) Showing the ability of controlling fans at the Fire Command Center, if applicable.

6 Mandatory failures

The following building related actions are mandatory and must be performed correctly during the examination. Inability to perform any of these actions will result in a failure:

- All call announcement including the stairs*.
- Localized announcements*.
- Communicating via Warden phone.
- Fail-safe door release.
- Recall of elevators in Fireman Service Phase I*.
- Independent/Manual Operation of elevators*.

* Buildings with Mini Class E alarms need to demonstrate how floors will be notified and how non Fireman service elevators will be recalled and parked.
Part III. Non-Fire Emergency Scenarios

During this section, every candidate will be presented with a specific non-fire emergency scenario. The candidate should analyze if the building occupants are in immediate danger and state the actions that the candidate would take should such a scenario occur. The candidate will be given approximately 7 minutes to prepare his/her responses. After the preparation time, the candidate must verbally state his/her answers in order to receive credit. The inspector will repeat the scenario at the candidate’s request.

When stating answers, the candidate should state all the actions that are required to be taken. The candidate should be as specific as possible and do not assume that actions were taken by others. Candidates should explain their actions from the beginning of the incident/emergency to the very end. The inspector may ask the candidate to restate and/or explain the answers. The candidate must inform the inspector when he/she has finished stating the answer.

EAP ACTIONS

In the event of a non-fire emergency in or affecting the building, the following actions must be taken:

- The FS/EAP Director should immediately report to the Fire Command Center. The Fire Command Center should be used for command, communication and control of the emergency.
- Immediately call 911 to report (1) any emergency situation and (2) any determination to implement the EAP and which EAP action is being implemented. These two details must be covered to receive full credit during the On Site exam. (Title 3 Rules of the City of New York 404-02-(c)-7)
- Notify/consult with the EAP Brigade regarding the implementation of the EAP.
- The FS/EAP Director may decide to perform different actions based on the different events and emergency scenarios (as mentioned in the following pages). The most appropriate EAP actions may also vary depending on the specific emergency situation occurring and the building design and components. In general, the FS/EAP Director should implement an EAP action or combination of actions that will keep the occupants away from the threat.
- Notify the building occupants of
  a. What has occurred
  b. Where it has occurred
  c. What provisions of the EAP will be implemented (Inform the occupants of the appropriate actions to follow)
  d. Why they are being instructed to follow the EAP actions (explain why the EAP actions are necessary)
- Assess the Building Components or Systems and take appropriate actions
- **Egress from entrances/exits and stairways**
  The access/egress might be denied or limited based on different emergencies.

- **Elevator operation**
  Recall all elevators. Determine if it is safe to use elevators. If safe, only elevators provided with two-way voice communication are allowed to be used and must be operated in a manual/independent mode.

- **Evaluate ventilation system operation**
  Take appropriate actions.

- **Windows**
  - In some emergencies, windows may need to be placed in a closed position. The occupants may need to be moved away from shattering glass; however, in some emergencies, the windows may need to be opened (if possible) to increase the air flow.

- **Interior door, including fire doors**
  Maintain doors in the closed and unlocked position. All fail-safe (electromagnetic door release) devices (if applicable) will be released manually to ensure all re-entry doors are unlocked.

- **Evaluate electrical, natural gas, steam and other utility operations**
  All should be assessed. The shut-off valve should be indicated on the EAP of the building.

- **Evaluate fuel oil storage systems and associated pumps and piping**
  All should be assessed.

- **Communications**
  - Monitor the media via the television, radio and internet for updates from local authorities (i.e. the Mayor’s Office).
  - Maintain appropriate communication with the building occupants. Prevent occupants from panic or self-evacuation.

- **Follow the law enforcement personnel and first responders’ instructions.**
  As an FS/EAP director, you are required to notify arriving law enforcement personnel and first responders of the nature of the emergency, the information of the building component (e.g. BIC, EAP, and keys/access cards) and the response up to the current time; and comply with the directions of the law enforcement and/or other lawful authority.

- **The “all clear” can only be given when it is announced by the authorities that the threat has passed.**
  Once the “all clear” is given, an appropriate announcement should be made to the building occupants by the authorities that the threat has passed.
Four EAP actions for different areas and different emergency scenarios

This section is meant as a commentary to support & further clarify the tables enclosed (table 1-1, 1-2, 2-1, 2-2, 3-1 and 3-2). This section is broken down into different types of emergencies. Each emergency is then split into two areas: inside the building & outside the building. The actions discussed will follow along as seen below:

- The meaning of the **affected area** in this booklet is determined to be:
  
  **The area(s) that may be in close proximity to the threat/incident and experience the immediate impact of the threat/incident.**

- The meaning of the **rest of the building** in this booklet is determined to be:
  
  **The area(s) other than the affected area**

The FDNY has created three categories of response actions: they are “RECOMMENDED” (refer to table 1-1 & table 1-2), “ACCEPTABLE” (refer to table 2-1 & table 2-2) and “UNACCEPTABLE” (table 3-1 & 3-2).

The following content is arranged as follows:

- **The type of the emergency**
  - **Outside** — Action to be taken for:
    - Affected Area -Recommended → Acceptable → Unacceptable
    - Rest of the Building -Recommended → Acceptable → Unacceptable
  - **Inside** — **Action to be taken for:**
    - Affected Area -Recommended → Acceptable → Unacceptable
    - Rest of the Building -Recommended → Acceptable → Unacceptable

This booklet offers, as a general guide, the following non-fire EAP actions steps,
as used in table 1-1, 1-2, 1-3, 2-1, 2-2, 3-1, 3-2 & 3-3. They will be used as a scoring criterion for the EAP on-site test:

- The **recommended** EAP actions (listed in the table 1-1, 1-2 & 1-3) - the actions that the FDNY strongly recommends the applicants should apply for the specific scenarios. The applicants will receive full credit if they choose the action(s) in the On-Site exam.
- The **acceptable** EAP actions (listed in the table 2-1 & 2-2) - the actions that the FDNY does not recommend. The applicants will receive partial credit in the On-Site exam.
- The **unacceptable** EAP actions (listed in the table 3-1, 3-2 & 3-3) - the actions that the FDNY does not encourage the applicants to apply for the specific scenarios. The applicants will NOT receive credit in the On-Site exam.

The study material is **NOT** a mandate regarding EAP actions; it is only providing a rule of thumb for general emergency situations. **The most appropriate EAP actions may vary depending on the specific emergency situation which occurs within the context of the building design and components.**

1 Emergency Actions for Biological Incident or Release

If there is any suspicious letter or package that may contain a biological agent, such as "anthrax", the envelope or package should be isolated and contaminated. The first responders will perform a threat assessment of the situation and make decisions about further actions.

1.1 Biological agent released outside the building impacting the immediate area

I. EAP actions (recommended, acceptable and unacceptable)
   a. Recommended actions (refer to table 1-1)
      (1) Recommended actions for the affected area: in-building relocation.
         ```
         Reason:
         If a credible biological threat has occurred outside the building (e.g. outside the building main entrance), the openings of the building or the place near the main entrance (e.g. the lobby) have a high probability of being exposed to the threat and should be treated as affected areas.
         ```
         The occupants may be exposed to the threat. The FDNY recommends relocating the occupants to a safe in-building relocation area.
         
         (2) Recommended actions for the rest of the building: shelter in place.
         ```
         Reason:
         Since the rest of the building is not affected by the incident, the FS/EAP Director should instruct the occupants to remain where they are.
         ```
   b. Acceptable actions: (refer to table 2-1)
      (1) Acceptable actions for the affected area: NA.

30
(2) Acceptable actions for the rest of the building: in-building relocation.
   ➢ Reason:
   There is no urgent need to move the occupants who are not affected by
   the incident; however, the FDNY accepts (but does not recommend) if the
   FS/EAP Director makes the choice to move the occupants to safe in-
   building relocation areas.

c. Unacceptable actions: (refer to table 3-1)
(1) Unacceptable actions for the affected area: shelter in place, partial or full
   evacuation (evacuation P/F).
   ➢ Reason:
   The occupants who are in the affected area should be moved. The
   decision made to shelter in place may expose the occupants to the threat.
   Evacuating the occupants and exposing them to the outside
   biological/toxic agent will be considered an unacceptable action by the
   FDNY for this scenario. The FS/EAP Director should direct the occupants
   to stay away from the threat; it may be safer for the occupants to remain
   inside the building.

(2) Unacceptable actions for the rest of the building: partial or full evacuation
   (evacuation P/F).
   ➢ Reason:
   Evacuating the occupants and exposing them to the outside
   biological/toxic agent will be considered an unacceptable action by the
   FDNY for this scenario. The FS/EAP Director should direct the occupants
   to stay away from the threat; it may be safer for the occupants to remain
   inside the building.

II. Other special notes:
   The affected area should be isolated. All building entrances (including
   loading dock, garage door, etc.) should be closed and sealed off to prevent
   any contamination from entering the building. It may also be advisable to
   post a guard at every entrance to limit both access and egress from the
   building.

1.2 Biological agent released inside the building (in a confined area only)

I. EAP actions (recommended, acceptable and unacceptable)
   a. Recommended actions (refer to table 1-1)
      (1) Recommended actions for the affected area: isolate the individual(s) who
      was/were directly exposed to the agent.
      ➢ Reason:
      The individual(s) who has/have been exposed to or have had contact with
      the possible biological agents must be isolated. The individual(s) should
      be isolated in an area free from any further exposure and away from
      other people who have not been exposed to the agent and be hold for
possible decontamination. By isolating both the affected area and individual(s), the FS/EAP director helps to limit the spread of the biological agents and allow the individual(s) to receive medical evaluation and treatment as soon as possible.

(2) **Recommended actions for the rest of the building:** shelter in place or in-building relocation.

- **Reason:**
  The decision made to implement a shelter in place or an in-building relocation is recommended by the FDNY. The occupants in the rest of the building are not experiencing the threat directly. There is no need to evacuate the occupants; however, the occupants should be alerted to stay away from the threat.

b. **Acceptable actions:** (refer to table 2-1)

1. **Acceptable actions for the affected area:** NA.

2. **Acceptable actions for the rest of the building:** partial or full evacuation (evacuation P/F).
   - **Reason:**
     There is no urgent need to move the occupants outside; however, the FDNY accepts (but does not recommend) if the FS/EAP Director chooses to evacuate the occupants to a safe, well-ventilated outside assembly area(s).

c. **Unacceptable actions:** (refer to table 3-1)

1. **Unacceptable actions for the affected area:** not isolate the individual(s) who has/have had direct contact with the agent.
   - **Reason:**
     The individual(s) who has/have had direct contact with the agent should be removed away from the threat but not be released to prevent possible cross-contamination.

2. **Unacceptable actions for the rest of the building:**
   - **Reason:**
     If the FS/EAP Director chooses to move the occupants, it will not be acceptable to the FDNY if he/she decides that the exit route for the occupants is passage through the affected area. The occupants should be alerted to stay away from the affected area, and not to pass through or enter it.

II. **Other special notes:**

The affected area should be isolated. Advise everyone to stay clear of the affected area.
1.3 Biological agent released inside the building, and possibly contaminates multiple floors (e.g. someone carried the agent to multiple floors)

I. EAP actions (recommended, acceptable and unacceptable)

a. Recommended actions (refer to table 1-1)
(1) Recommended actions for the affected area: isolate the individual(s) who was /were directly exposed to the agent.
  ➢ Reason:
   The individual(s) who has/have been exposed to or have had contact with the possible biological agents must be isolated. **The individual(s) should be isolated in an area free from any further exposure and away from other people who have not been exposed to the agent and be held for possible decontamination. By isolating both the affected area and individual(s), the FS/EAP Director helps to** limit the spread of the biological agents and allow the individual(s) to receive medical evaluation and treatment as soon as possible.

(2) Recommended actions for the rest of the building: shelter in place.
  ➢ Reason:
   Before the emergency personnel arrive, the decision made to implement a shelter in place is recommended by the FDNY. Because the agent has been carried around on multiple floors, it might contaminate undetermined locations. The FS/EAP Director should recommend that all individuals who have not been directly exposed to the agent to stay in place to wait for further instructions given from the emergency personnel. It could prevent the occupants from exposure to the agent.

b. Acceptable actions: (refer to table 2-1)
(1) Acceptable actions for the affected area: NA.

(2) Acceptable actions for the rest of the building: in-building relocation, partial or full evacuation (evacuation P/F).
  ➢ Reason:
   There is no urgent need to move the occupants; however, the FDNY accepts (but does not recommend) if the FS/EAP Director chooses to move the occupants to designated safe in-building relocation areas or to safe, well-ventilated outside assembly areas.

c. Unacceptable actions: (refer to table 3-1)
(1) Unacceptable actions for the affected area: not isolate the individual(s) who has /have had direct contact with the agent.
  ➢ Reason:
   The individual(s) who has/have had direct contact with the agent should be removed away from the threat, but not be released to prevent possible cross-contamination.
(2) Unacceptable actions for the rest of the building:

- **Reason:**
  If the FS/EAP Director chooses to move the occupants, it will not be acceptable to the FDNY if he/she decides that the exit route for the occupants is passage through the affected area. The occupants should be alerted to stay away from the affected area, and not to pass through or enter it.

II. Other special notes:
- The affected area should be isolated. Advise everyone to stay clear of the affected area.

2 Emergency Actions for Chemical Incident or Release

2.1 Chemical agent released outside the building impacting the immediate area

I. EAP actions (recommended, acceptable and unacceptable)

a. Recommended actions (refer to table 1-1)

(1) **Recommended actions for the affected area:** in-building relocation.

- **Reason:**
  If a credible chemical threat has occurred outside the building (e.g. outside the building main entrance), the openings of the building or the place near the main entrance (e.g. the lobby) which have higher risk for being exposed to the threat should be treated as affected areas.

  The occupants may be exposed to the threat. The FDNY recommends relocating the occupants to a safe in-building relocation area.

(2) **Recommended actions for the rest of the building:** shelter in place.

- **Reason:**
  Since the rest of the building is not affected by the incident, the FS/EAP Director should instruct the occupants to remain where they are.

b. Acceptable actions: (refer to table 2-1)

(1) **Acceptable actions for the affected area:** NA.

(2) **Acceptable actions for the rest of the building:** in-building relocation.

- **Reason:**
  There is no urgent need to move the occupants who are not affected by the incident; however, the FDNY accepts (but does not recommend) if the FS/EAP Director makes the choice to move the occupants to safe in-building relocation areas.

c. Unacceptable actions: (refer to table 3-1)

(1) **Unacceptable actions for the affected area:** shelter in place, partial or full evacuation (evacuation P/F).

- **Reason:**
  The occupants should be alerted to stay away from the affected area, and not to pass through or enter it.
The occupants who are in the affected area should be moved. The decision made to shelter in place may expose the occupants to the threat. Evacuating the occupants and exposing them to the outside threat will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat; it may be safer for the occupants to remain inside the building.

(2) Unacceptable actions for the rest of the building: partial or full evacuation (evacuation P/F).

- **Reason:** Evacuating the occupants and exposing them to the outside threat will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat; it may be safer for the occupants to remain inside the building.

II. Other special notes:
The affected area should be isolated. All building entrances (including loading dock, garage door, etc.) should be closed and sealed off to prevent any contamination from entering the building. It may also be advisable to post a guard at every entrance to limit both access and egress from the building.

### 2.2 Chemical agent released inside the building

I. EAP actions (recommended, acceptable and unacceptable)

a. Recommended actions (refer to table 1-1)

(1) **Recommended actions for the affected area:** in-building relocation, partial or full evacuation (evacuation P/F).

- **Reason:** The individual(s) who has/have been exposed to or have had contact with the possible chemical agents should be removed from the affected area (in-building relocation, partial or full evacuation). The **individual(s) should be relocated to an area free from any further exposure and away from other people who have not been exposed to the agent and be held for possible decontamination.** By isolating both the affected area and individual(s), the FS/EAP director helps to limit the spread of the chemical agents and allow the individual(s) to receive medical evaluation and treatment as soon as possible.

Decontamination includes changing of clothes and placing the contaminated clothes in a sealed plastic bag, if applicable. Washing with soap (preferably liquid) and water. Flushing skin with lots of water; flushing eyes with water if they are irritated.

In general, the FS/EAP Director should take action to find clean air quickly: evacuate or in-building relocate the occupants.
(2) **Recommended actions for the rest of the building:** shelter in place.

- *Reason:*
  The decision made to implement a shelter in place is recommended by the FDNY. Because there is no urgent need to move the occupants, the FS/EAP Director should recommend the occupants stay in place.

b. **Acceptable actions:** (refer to table 2-1)

(1) **Acceptable actions for the affected area:** NA.

(2) **Acceptable actions for the rest of the building:** in-building relocation, partial or full evacuation (evacuation P/F).

- *Reason:*
  There is no urgent need to move the occupants; however, the FDNY accepts (but does not recommend) if the FS/EAP Director chooses to move the occupants to designated safe in-building relocation areas or to safe, well-ventilated outside assembly areas.

c. **Unacceptable actions:** (refer to table 3-1)

(1) **Unacceptable actions for the affected area:** shelter in place.

- *Reason:*
  Sheltering the occupants in place in the affected area will serve to increase their contact with the threat.

(2) **Unacceptable actions for the rest of the building:**

- *Reason:*
  If the FS/EAP Director chooses to move the occupants, it will not be acceptable to the FDNY if he/she decides that the exit route for the occupants is passage through the affected area. The occupants should be alerted to stay away from the affected area, and not to pass through or enter it.

II. **Other special notes:**

The affected area should be isolated. Advise everyone to stay clear of the affected area.

---

### 3 Emergency Actions for Carbon Monoxide/Natural Gas Leak

#### 3.1 Carbon Monoxide/Natural Gas Leak found outside the building impacting the immediate area

I. **EAP actions (recommended, acceptable and unacceptable)**

a. **Recommended actions** (refer to table 1-1)

(1) **Recommended actions for the affected area:** in-building relocation.

- *Reason:*
  The occupants may be exposed to the threat. The FDNY recommends relocating the occupants to a safe in-building relocation area.
(2) **Recommended actions for the rest of the building**: shelter in place.

*Reason:*
Since the rest of the building is not affected by the incident, the FS/EAP Director should instruct the occupants to remain where they are.

b. **Acceptable actions**: (refer to table 2-1)
(1) **Acceptable actions for the affected area**: NA.

(2) **Acceptable actions for the rest of the building**: in-building relocation.

*Reason:*
There is no urgent need to move the occupants who are not affected by the incident; however, the FDNY accepts (but does not recommend) if the FS/EAP Director make the choice to move the occupants to safe in-building relocation areas.

c. **Unacceptable actions**: (refer to table 3-1)
(1) **Unacceptable actions for the affected area**: shelter in place, partial or full evacuation (evacuation P/F).

*Reason:*
The occupants who are in the affected area should be moved. The decision made to shelter in place may expose the occupants to the threat. Evacuating the occupants and exposing them to the outside threat will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat; it may be safer for the occupants to remain inside the building.

(2) **Unacceptable actions for the rest of the building**: partial or full evacuation (evacuation P/F).

*Reason:*
Evacuating the occupants and exposing them to the outside threat will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat; it may be safer for the occupants to remain inside the building.

II. **Other special notes:**
Isolate the affected area. Advise everyone to stay clear of the affected area.

### 3.2 Carbon Monoxide/Natural Gas Leak found inside the building (in a specific floor/area only)

**If the FS/EAP Director or his/her brigade members cannot decide if the gas leak is a major or minor leak, the leak should be treated as a major leak. In this case, the FS/EAP Director should follow the procedure recommended in 3.3 Carbon Monoxide/Natural Gas Leak found inside the building (throughout the building)**

I. **EAP actions (recommended, acceptable and unacceptable)**
   a. **Recommended actions** (refer to table 1-1)
(1) **Recommended actions for the affected area**: in-building relocation, partial or full evacuation (evacuation P/F).

- **Reason:**
  Carbon monoxide gas and natural gas are both flammable and constitute a health hazard. The longer the occupants are exposed to the gas, the more ill they will become. The FS/EAP Director should in-building relocate or evacuate the occupants to **empty the affected area**. All occupants of the following floors: (1) the affected floor(s) that is/are reported for a suspicious gas leak, (2) the floor above the affected floor, and (3) the floor below the affected floor should be in-building relocated or evacuated, so that they may find fresh, clean air as quickly as possible.

(2) **Recommended actions for the rest of the building**: shelter in place

- **Reason:**
  If the gas leak is minor and only in a certain small area, the rest of the building is not affected by the incident, the FS/EAP Director should instruct the occupants to remain where they are.

b. **Acceptable actions**: (refer to table 2-1)

(1) **Acceptable actions for the affected area**: NA.

(2) **Acceptable actions for the rest of the building**: in-building relocation, partial, or full evacuation (evacuation P/F).

- **Reason:**
  There is no urgent need to move the occupants; however, the FDNY accepts (but does not recommend) if the FS/EAP Director chooses to move the occupants to designated safe in-building relocation areas or to safe, well-ventilated outside assembly areas.

c. **Unacceptable actions**: (refer to table 3-1)

(1) **Unacceptable actions for the affected area**: shelter in place.

- **Reason:**
  The occupants who are in the affected area should not be sheltered in place. Sheltering the occupants in place may expose them to the threat.

(2) **Unacceptable actions for the rest of the building**:

- **Reason:**
  If the FS/EAP Director chooses to move the occupants, it will not be acceptable to the FDNY if he/she decides that the exit route for the occupants is passage through the affected area. The occupants should be alerted to stay away from the affected area, and not to pass through or enter it.

II. **Other special notes**:

  The affected area should be isolated. Advise everyone to stay clear of the affected area.
3.3 Carbon Monoxide/Natural Gas Leak found inside the building (throughout the building)

I. EAP actions (recommended, acceptable and unacceptable)
   a. Recommended actions (refer to table 1-1)
      (1) Recommended actions for the affected area: full evacuation.
         ➢ **Reason:**
         “Full evacuation” will be the only recommended and acceptable action. Once the gas leak is ignited by a spark, it might cause major damage to the occupants and the building structure. In order to prevent a possible catastrophe, it is highly recommended that the entire building be evacuated before the “all clear” is given by the FDNY.
      (2) Recommended actions for the rest of the building: full evacuation.
         ➢ **Reason:**
         “Full evacuation” will be the only recommended and acceptable action. Once the gas leak is ignited by a spark, it might cause major damage to the occupants and the building structure. In order to prevent a possible catastrophe, it is highly recommended that the entire building be evacuated before the “all clear” is given by the FDNY.

   b. Acceptable actions:
      (1) Acceptable actions for the affected area: NA.
      (2) Acceptable actions for the rest of the building: NA.

   c. Unacceptable actions: (refer to table 3-1)
      (1) Unacceptable actions for the affected area: shelter in place, in-building relocation and partial evacuation.
         ➢ **Reason:**
         No occupant should be allowed to stay inside the building.
      (2) Unacceptable actions for the rest of the building: shelter in place, in-building relocation and partial evacuation.
         ➢ **Reason:**
         No occupant should be allowed to stay inside the building.

II. Other special notes:
   It may be advisable to post a guard at every entrance to limit the access to the building.

4 Emergency Actions for Explosion

4.1 An explosion happened directly outside the building impacting the immediate area
   I. EAP actions (recommended, acceptable and unacceptable)
      a. Recommended actions (refer to table 1-1)
(1) **Recommended actions for the affected area:** in-building relocation.

➢ *Reason:*
   
   If an explosion happened outside the building, the building may still be exposed to a threat. The FDNY recommends that the FS/EAP Director move the occupants to safe in-building relocation areas.

   **If the outdoor explosion has severely damaged the building structure,** refer to 4.2 “An explosion happened inside the building”.

(2) **Recommended actions for the rest of the building:** in-building relocation.

➢ *Reason:*
   
   If an explosion happened outside the building, the building may still be exposed to a threat. The FDNY recommends that the FS/EAP Director move the occupants to safe in-building relocation areas.

   **If the outdoor explosion has severely damaged the building structure,** refer to 4.2 “An explosion happened inside the building”.

b. **Acceptable actions:** (refer to table 2-1)

(1) **Acceptable actions for the affected area:** NA.

(2) **Acceptable actions for the rest of the building:** shelter in place.

➢ *Reason:*
   
   It is safer to relocate all occupants to safe in-building relocation areas for outdoor explosion events; however, since the rest of the building may not be affected by the event, the FDNY also accepts (but does not recommend) that the FS/EAP Director suggest to occupants in the rest of the building to remain in place.

c. **Unacceptable actions:** (refer to table 3-1)

(1) **Unacceptable actions for the affected area:** shelter in place, partial or full evacuation (evacuation P/F).

➢ *Reason:*
   
   The occupants who are in the affected area should not be sheltered in place. Sheltering the occupants in place may expose them to the threat. The occupants who are in the affected area should be moved.

   It is considered to be unacceptable by the FDNY for the FS/EAP Director to evacuate the occupants immediately after the explosion occurs outside the building. It is safer to keep the occupants inside the building until credible information can be gathered and an informed decision can be made.
The partial or full evacuation decision is recommended by the FDNY only when the building structure is damaged. The occupants should be alerted to stay away from the affected area, and not to pass through or enter it.

(2) **Unacceptable actions for the rest of the building: partial or full evacuation (evacuation P/F).**

- **Reason:**
  It is considered to be unacceptable by the FDNY for the FS/EAP Director to evacuate the occupants immediately after the explosion occurs outside the building. It is safer to keep the occupants inside the building until credible information can be gathered and an informed decision can be made.

II. Other special notes:
- Isolate the affected area. Advise everyone to stay clear of the affected area.

### 4.2 An explosion happened inside the building

I. EAP actions (recommended, acceptable and unacceptable)

a. Recommended actions (refer to table 1-1)

(1) **Recommended actions for the affected area:** full evacuation.

- **Reason:**
  “Full evacuation” will be the recommended and acceptable action by the FDNY for this scenario. An explosion very often causes damage to the building structure, and can cause many serious post explosion injuries among survivors. The FS/EAP Director should determine the best route for all building occupants to leave the building quickly.

  **Relocation in a building is recommended only when all the paths to the exits are blocked.**

(2) **Recommended actions for the rest of the building:** full evacuation.

- **Reason:**
  “Full evacuation” will be the recommended and acceptable action by the FDNY for this scenario. An explosion very often causes damage to the building structure, and can cause many serious post explosion injuries among survivors. The FS/EAP Director should determine the best route for all building occupants to leave the building quickly.

  **Relocation in a building is recommended only when all the paths to the exits are blocked.**
b. Acceptable actions:
(1) **Acceptable actions for the affected area**: NA.
(2) **Acceptable actions for the rest of the building**: NA.

c. Unacceptable actions: (refer to table 3-1)
(1) **Unacceptable actions for the affected area**: shelter in place, in-building relocation or partial evacuation.

- **Reason**: If there is any safe way to leave the building, the FS/EAP Director should not suggest that any occupant stay inside the building. It is unsafe to leave any occupant inside the building before the authorities declare that the building structure is safe and that there are no other explosives inside the building (most bomb attacks have more than 2 explosives).

- **If the explosion has compromised all safe exit routes, the FS/EAP Director should suggest safe in-building relocation areas for the occupants.**

(2) Unacceptable actions for the rest of the building: shelter in place, in-building relocation or partial evacuation.

- **Reason**: If there is any safe way to leave the building, the FS/EAP Director should not suggest that any occupant stay inside the building. It is unsafe to leave any occupant inside the building before the authorities declare that the building structure is safe and that there are no other explosives inside the building (most bomb attacks have more than 2 explosives).

- **If the explosion has compromised all safe exit routes, the FS/EAP Director should suggest safe in-building relocation areas for the occupants.**

5 **Emergency Actions for a Suspicious (Unattended) Package**

If the suspicious package **has significant feature(s)** indicating that it may **contain explosives**, the FS/EAP Director should refer to 4. **Emergency Actions for Explosion**.

Packages that have lumps, bulges, protruding wires, or aluminum foil; buzz, tick or make a sloshing sound; or, have a bomb threat note related to it could be indicators of a potential bomb.

- **If there is no clear information what the suspicious package contains**, the FDNY provides the following guidance to be followed:

5.1 **A suspicious package is reported to be located directly outside the building impacting the immediate area**

I. **EAP actions (recommended, acceptable and unacceptable)**
   a. **Recommended actions (refer to table 1-1)**
Recommended actions for the affected area: in-building relocation.

Reason:
If there is a suspicious package located outside the building impacting the immediate occupancy area, even it does not have any significant feature(s) indicating that it contains explosives, the building occupants may still be exposed to the potential risk. The FDNY recommends that the FS/EAP Director make the choice to move the occupants to safe in-building relocation areas.

Recommended actions for the rest of the building: shelter in place.

Reason:
If there is a suspicious package located outside the building impacting the immediate occupancy area, and it does not have any significant feature(s) indicating that it contains explosives. The decision made to implement a shelter in place for the rest of the building is recommended by the FDNY. Because there is no urgent need to move the occupants, the FS/EAP Director should recommend the occupants stay in place.

Acceptable actions: (refer to table 2-1)

1. Acceptable actions for the affected area: NA.

Reason:

There is no urgent need to move the occupants; however, the FDNY accepts (but does not recommend) if the FS/EAP Director chooses to move the occupants to designated safe in-building relocation areas.

Unacceptable actions: (refer to table 3-1)

1. Unacceptable actions for the affected area: shelter in place, partial or full evacuation (evacuation P/F).

Reason:
The occupants who are in the affected area should not be sheltered in place. Sheltering the occupants in place may expose them to the threat. The occupants who are in the affected area should be moved.

Evacuating the occupants and exposing them to the outside threat will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat; it may be safer for the occupants to remain inside the building.

The occupants should be alerted to stay away from the affected area, and not to pass through or enter it.

2. Unacceptable actions for the rest of the building: partial or full evacuation (evacuation P/F).

Reason:
Evacuating the occupants and exposing them to the outside threat will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat. It may be safer for the occupants to remain inside the building.
The occupants should be alerted to stay away from the affected area, and not to pass through or enter it.

II. Other special notes:
DO NOT HANDLE THE PACKAGE. Isolate the affected area. Advise everyone to stay clear of the affected area.

5.2 A suspicious package is reported inside the building

I. EAP actions (recommended, acceptable and unacceptable)
   a. Recommended actions (refer to table 1-1)
      (1) Recommended actions for the affected area: in-building relocation, partial or full evacuation (evacuation P/F).
         ➢ Reason:
         If a suspicious package(s) is/are found inside the building, even it does not have any significant feature(s) indicating that it contains explosives, the occupants may still be exposed to the potential risk. The FS/EAP Director should in-building relocate or evacuate the occupants to empty the affected area.
         If an evacuation is announced to the occupants, the FS/EAP Director must determine the best route(s) for the occupants. The goal is to stay as far away from the threat as possible. There should not be anyone near or inside the area before the “all clear” is announced by the FDNY/NYPD.
      (2) Recommended actions for the rest of the building: shelter in place.
         ➢ Reason:
         If a suspicious package(s) is/are found inside the building, and it does not have any significant feature(s) indicating that it contains explosives, the decision made to implement a shelter in place is recommended by the FDNY. Because there is no urgent need to move the occupants, the FS/EAP Director should recommend the occupants stay in place.
   b. Acceptable actions: (refer to table 2-1)
      (1) Acceptable actions for the affected area: NA.
      (2) Acceptable actions for the rest of the building: in-building relocation, partial or full evacuation (evacuation P/F).
         ➢ Reason:
         There is no urgent need to move the occupants; however, the FDNY accepts (but does not recommend) if the FS/EAP Director chooses to move the occupants to designated safe in-building relocation areas or to safe, well-ventilated outside assembly areas.
   c. Unacceptable actions: (refer to table 3-1)
      (1) Unacceptable actions for the affected area: shelter in place.
         ➢ Reason:
         The occupants who are in the affected area should be moved. The decision made to shelter in place may expose the occupants to the threat.
Unacceptable actions for the rest of the building:

- **Reason:**
  
  If the FS/EAP Director chooses to move the occupants, it will not be acceptable to the FDNY if he/she decides that the exit route for the occupants is passage through the affected area. The occupants should be alerted to stay away from the affected area, and not to pass through or enter it.

III. Other special notes:

Isolate the affected area. Advise everyone to stay clear of the affected area.

6 **Emergency Actions for Civil Disturbances (outside the building)**

Civil disturbances include riots, demonstrations, threatening individuals, crimes in progress, or assemblies that have become significantly disruptive.

I. EAP actions (recommended, acceptable and unacceptable)

a. Recommended actions (refer to table 1-1)

(1) Recommended actions for the affected area: in-building relocation.

  - **Reason:**
    
    If there is a civil disturbance happening outside the building, the occupants may be exposed to the threat. The FDNY recommends relocating the occupants to a safe in-building relocation area.

(2) Recommended actions for the rest of the building: shelter in place.

  - **Reason:**
    
    Since the rest of the building is not affected by the incident, the FS/EAP Director should instruct the occupants to remain in place.

b. Acceptable actions: (refer to table 2-1)

(1) Acceptable actions for the affected area: NA.

(2) Acceptable actions for the rest of the building: in-building relocation.

  - **Reason:**
    
    There is no urgent need to move the occupants who are not affected by the incident; however, the FDNY accepts (but does not recommend) if the FS/EAP Director chooses to move the occupants to safe in-building relocation areas.

c. Unacceptable actions: (refer to table 3-1)

(1) Unacceptable actions for the affected area: shelter in place, partial or full evacuation (evacuation P/F).

  - **Reason:**
    
    The occupants who are in the affected area should be moved. The decision made to shelter in place may expose the occupants to the threat.
Evacuating the occupants and exposing them to the outside threat will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat; it may be safer for the occupants to remain inside the building.

(2) Unacceptable actions for the rest of the building: partial or full evacuation (evacuation P/F).

- **Reason:**
  Evacuating the occupants and exposing them to the outside threat will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat; it may be safer for the occupants to remain inside the building.

II. Other special notes:
All building entrances (including loading dock, garage door, etc.) should be closed to prevent rioters from entering the building. It may also be advisable to post a guard at every entrance to limit access to the building.

7 Emergency Actions for Building Utilities Failure
There can be many types of Building Utilities Failure events depending upon the building components and the severity of the failure. FDNY recommends any EAP action (shelter in place, in-building relocation, partial or full evacuation) that is reasonable and justifiable; however, FDNY does not accept sheltering occupants in place if the emergency has compromised the affected area and the occupants will be in danger for remaining in the affected area. In this case, the occupants who are in the affected area should be relocated within the building or be evacuated.

8 Emergency Actions for a Building with Physical Damage/Structural Failure
If the FS/EAP Director cannot decide if the structural failure is major or minor, he/she should assume it as a major failure that may lead to building collapse and take the EAP actions that will protect the occupants from the possible threat.

8.1 The building has minor physical damage (such as broken windows), and the damage is in some specific areas that will NOT lead to building collapse.

I. EAP actions (recommended, acceptable and unacceptable)
   a. Recommended actions (refer to table 1-1)
      (1) Recommended actions for the affected area: in-building relocation, partial or full evacuation (evacuation P/F).

- **Reason:**
  If there is a minor physical damage to the building, the FS/EAP Director should in-building relocate or evacuate the occupants to empty the affected area; however, if an evacuation is announced to the occupants, the FS/EAP Director must determine the best route(s) for the occupants
to avoid the threat. There should not be anyone near or inside the area before the “all clear” is announced by the authority (e.g. FDNY).

(2) **Recommended actions for the rest of the building:** shelter in place or in-building relocation.

- **Reason:**
  The decision made to implement a shelter in place is recommended by the FDNY. Because there is no urgent need to move the occupants, the FS/EAP Director could recommend that the occupants stay in place; however, it could also be recommended by the FDNY that the FS/EAP Director may make the choice to relocate all building occupants within the building to ensure their safety.

b. Acceptable actions: (refer to table 2-1)

1. Acceptable actions for the affected area: NA.

2. Acceptable actions for the rest of the building: partial or full evacuation (evacuation P/F).

- **Reason:**
  There is no urgent need to move the occupants outside the building; however, the FDNY accepts (but does not recommend) if the FS/EAP Director chooses to move the occupants to safe, outside assembly areas.

c. Unacceptable actions: (refer to table 3-1)

1. Unacceptable actions for the affected area: shelter in place.

- **Reason:**
  The occupants who are in the affected area should be moved. The decision made to shelter in place may expose the occupants to the threat.

2. Unacceptable actions for the rest of the building:

- **Reason:**
  If the FS/EAP Director chooses to move the occupants, it will not be acceptable to the FDNY if he/she decides that the exit route for the occupants is passage through the affected area. The occupants should be alerted to stay away from the affected area, and not to pass through or enter it.

II. Other special notes:
Isolate the affected area. Advise everyone to stay clear of the affected area.

8.2 **The building has possible severe structural failure (such as a major wall breakdown) or the damages are within multiple floors/large areas that may lead to building collapse**

I. EAP actions (recommended, acceptable and unacceptable)

a. Recommended actions (refer to table 1-1)
1. **Recommended actions for the affected area:** full evacuation.

   - **Reason:**
     - "Full evacuation" will be the recommended and acceptable action by the FDNY for this scenario. Severe building structural damage may cause the building to collapse. The FS/EAP Director should determine the best route for all building occupants to leave the building quickly.

   **In-building relocation is recommended only when all the paths to the exits are blocked.**

2. **Recommended actions for the rest of the building:** full evacuation.

   - **Reason:**
     - "Full evacuation" will be the recommended and acceptable action by the FDNY for this scenario. Severe building structural damage may cause the building to collapse. The FS/EAP Director should determine the best route for all building occupants to leave the building quickly.

   **In-building relocation is recommended only when all the paths to the exits are blocked.**

b. **Acceptable actions:**

   1. **Acceptable actions for the affected area:** NA.
   2. **Acceptable actions for the rest of building:** NA.

c. **Unacceptable actions:** (refer to table 3-1)

   1. **Unacceptable actions for the affected area:** shelter in place, in-building relocation, or partial evacuation.

      - **Reason:**
        - If there is any safe way to leave the building, the FS/EAP Director should not suggest any occupant stay inside the building. It is unsafe to leave any occupant inside the building before the authorities declare the building structure is safe.
        - If all safe exit routes are compromised, the FS/EAP Director should suggest safe in-building relocation areas for the occupants.

   2. **Unacceptable actions for the rest of the building:** shelter in place, in-building relocation, or partial evacuation.

      - **Reason:**
        - If there is any safe way to leave the building, the FS/EAP Director should not suggest any occupant stay inside the building. It is unsafe to leave any occupant inside the building before the authorities declare the building structure is safe.
        - If all safe exit routes are compromised, the FS/EAP Director should suggest safe in-building relocation areas for the occupants.

II. **Other special notes:**

   All building entrances should be closed.
Emergency Actions for Natural Disasters

The recommended/acceptable/unacceptable actions for the natural disasters should depend upon whether a given disaster causes structural damage to the building, or it causes any building utilities failure.

9.1 Natural disaster and the building structure is not compromised

I. EAP actions (recommended, acceptable and unacceptable)
   a. Recommended actions (refer to table 1-2)
      (1) Recommended actions for the affected area: in-building relocation.
         ➢ **Reason:**
         It is a general natural disaster procedure (such as, earthquake, hurricane, tornadoes, storms) not to spontaneously evacuate. It is safer to stay inside the building rather than leaving the building to avoid falling or flying debris. The window areas (in earthquake conditions, it might also include areas with mirrors and overhead fixtures) are the most vulnerable areas in most natural disasters.
         The FS/EAP Director should relocate the occupants of the affected area to safe in-building relocation areas.

      (2) Recommended actions for the rest of the building: shelter in place.
         ➢ **Reason:**
         Since the rest of the building is not affected by the incident, the FS/EAP Director should instruct the occupants to remain in place.

   b. Acceptable actions: (refer to table 2-2)
      (1) Acceptable actions for the affected area: NA.

      (2) Acceptable actions for the rest of the building: in-building relocation.
         ➢ **Reason:**
         There is no urgent need to move the occupants who are not affected by the incident; however, the FDNY accepts (but does not recommend) if the FS/EAP Director chooses to move the occupants to safe in-building relocation areas.

   c. Unacceptable actions: (refer to table 3-2)
      (1) Unacceptable actions for the affected area: shelter in place, partial or full evacuation (evacuation P/F).
         ➢ **Reason:**
         The occupants who are in the affected area should be moved. The decision made to shelter in place may expose the occupants to the threat. Evacuating the occupants and exposing them to the outside natural disaster will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat. It may be safer for the occupants to remain inside the building.

      (2) Unacceptable actions for the rest of the building: partial or full evacuation (evacuation P/F).
         ➢ **Reason:**
         Evacuating the occupants and exposing them to the outside natural disaster will be considered an unacceptable action by the FDNY for this
scenario. The FS/EAP Director should direct the occupants to stay away from the threat. It will probably be safer for the occupants to remain inside the building.

9.2 A natural disaster causing minor building physical damage (such as broken windows), which will NOT cause the building to collapse

If the FS/EAP Director cannot decide if the building physical damage is major or minor, he/she should assume it as a major building structural failure that may lead to building collapse and take the EAP actions that will protect the occupants from the possible threat.

I. EAP actions (recommended, acceptable and unacceptable)

a. Recommended actions (refer to table 1-2)

(1) Recommended actions for the affected area: in-building relocation.

✓ Reason:
If there is minor physical damage to the building, the FS/EAP Director should in-building relocate the occupants to empty the affected area. There should not be anyone near or inside the area before the “all clear” is announced by the authority.

(2) Recommended actions for the rest of the building: shelter in place or in-building relocation.

✓ Reason:
The decision made to implement a shelter in place is recommended by the FDNY. Because there is no urgent need to move the occupants, the FS/EAP Director could recommend to the occupants to stay in place; however, it could also recommended by the FDNY that the FS/EAP Director make the choice to relocate all building occupants within the building to ensure their safety.

b. Acceptable actions:

(1) Acceptable actions for the affected area: NA.

(2) Acceptable actions for the rest of the building: NA.

c. Unacceptable actions: (refer to table 3-2)

(1) Unacceptable actions for the affected area: shelter in place, partial or full evacuation (evacuation P/F).

✓ Reason:
The occupants who are in the affected area should be moved. The decision made to shelter in place may expose the occupants to the threat. It is safer to stay inside the building so as to avoid falling or flying debris rather than leave the building.

(2) Unacceptable actions for the rest of the building: partial or full evacuation (evacuation P/F).

✓ Reason:
It is safer to stay inside the building so as to avoid falling or flying debris rather than leave the building.
II. Other special notes:
Isolate the affected area. Advise everyone to stay clear of the affected area.

9.3 A natural disaster which caused major building structural failure that may cause building collapse

I. EAP actions (recommended, acceptable and unacceptable)
a. Recommended actions (refer to table 1-2)
   (1) Recommended actions for the affected area: full evacuation.
       Reason:
       “Full evacuation” will be the recommended and acceptable action by the FDNY for this scenario. Severe building structural damage may cause the building to collapse. The FS/EAP Director should determine the best route for all building occupants to leave the building quickly.

       In-building relocation is recommended only when all the paths to the exits are blocked.

   (2) Recommended actions for the rest of the building: full evacuation.
       Reason:
       “Full evacuation” will be the recommended and acceptable action by the FDNY for this scenario. Severe building structural damage may cause the building to collapse. The FS/EAP Director should determine the best route for all building occupants to leave the building quickly.

       In-building relocation is recommended only when all the paths to the exits are blocked.

b. Acceptable actions:
   (1) Acceptable actions for the affected area: NA.
   (2) Acceptable actions for the rest of building: NA.

c. Unacceptable actions: (refer to table 3-2)
   (1) Unacceptable actions for the affected area: shelter in place, in-building relocation, or partial evacuation.
       Reason:
       If there is any safe way to leave the building, the FS/EAP Director should not suggest any occupant stay inside the building. It is unsafe to leave any occupant inside the building before the authorities declare the building structure is safe.
       If all safe exit routes are compromised, the FS/EAP Director should suggest safe in-building relocation areas for the occupants.

   (2) Unacceptable actions for the rest of the building: shelter in place, in-building relocation, or partial evacuation.
       Reason:
       If there is any safe way to leave the building, the FS/EAP Director should not suggest any occupant stay inside the building. It is unsafe to leave any occupant inside the building before the authorities declare the building structure is safe.
If all safe exit routes are compromised, the FS/EAP Director should suggest safe in-building relocation areas for the occupants.

II. Other special notes:
All building entrances should be closed.

9.4 Building power failure which is caused by a natural disaster
I. EAP actions (recommended, acceptable and unacceptable)
a. Recommended actions (refer to table 1-2)
(1) Recommended actions for the affected area: shelter in place or in-building relocation.
   - **Reason:**
     It is safer to stay inside the building to avoid falling or flying debris and wait for the authorities rather than leaving the building; however, **FDNY does not accept sheltering occupants in place if the emergency has compromised the affected area and the occupants will be in danger for remaining in the affected area. In this case, the occupants who are in the affected area should be relocated within the building or be evacuated.**
   (2) Recommended actions for the rest of the building: shelter in place or in-building relocation.
   - **Reason:**
     It is safer to stay inside the building to avoid falling or flying debris and wait for the authorities rather than leaving the building.

b. Acceptable actions:
   (1) Acceptable actions for the affected area: NA.
   (2) Acceptable actions for the rest of the building: NA.

c. Unacceptable actions: (refer to table 3-2)
   (1) Unacceptable actions for the affected area: partial or full evacuation (evacuation P/F).
   - **Reason:**
     If there is a natural disaster occurring outside, instructing the occupants to leave the building may result in more injuries than suggesting that they remain inside the building.
   (2) Unacceptable actions for the rest of the building: partial or full evacuation (evacuation P/F).
   - **Reason:**
     If there is a natural disaster occurring outside, instructing the occupants to leave the building may result in more injuries than suggesting that they remain inside the building.

9.5 The building affected by flooding caused by a natural disaster
I. EAP actions (recommended, acceptable and unacceptable)
a. Recommended actions (refer to table 1-2)
Recommended actions for the affected area: in-building relocation.

- **Reason:**
  The FS/EAP Director should relocate the occupants of the affected area to safe in-building relocation areas.

Recommended actions for the rest of the building: shelter in place or in-building relocation.

- **Reason:**
  The decision made to implement a shelter in place is recommended by the FDNY. Because there is no urgent need to move the occupants, the FS/EAP Director could recommend the occupants stay in place; however, it is also could be recommended by the FDNY that the FS/EAP Director make the choice to relocate all building occupants within the building to ensure their safety.

b. Acceptable actions:
   (1) Acceptable actions for the affected area: NA.
   (2) Acceptable actions for the rest of the building: NA.

c. Unacceptable actions: (refer to table 3-2)
   (1) Unacceptable actions for the affected area: shelter in place, partial or full evacuation (evacuation P/F).

   - **Reason:**
     The occupants who are in the affected area should be moved. The decision made to shelter in place may expose the occupants to the threat. Evacuating the occupants and exposing them to the outside natural disaster will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to avoid the threat; it may be safer for the occupants to remain inside the building.

   (2) Unacceptable actions for the rest of the building: partial or full evacuation (evacuation P/F).

   - **Reason:**
     Evacuating the occupants and exposing them to the outside natural disaster will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to avoid the threat. It may be safer for the occupants to remain inside the building.

II. Other special notes:
Isolate the affected area. Advise everyone to stay clear of the affected area.
10 Emergency Actions for Active Shooter Events

10.1 Introduction

The agreed-upon definition of an active shooter by U.S. government agencies is “an individual actively engaged in killing or attempting to kill people in a confined and populated area.” Implicit in this definition is that the subject’s criminal actions involve the use of firearms. According to the New York City Police Department, an active shooter emergency should be excluded from the following situations: gang-related shootings, shootings that solely occurred in domestic settings, robberies, drive-by shootings, attacks that did not involve a firearm, and attacks categorized primarily as hostage-taking incidents. In its definition, the Department of Homeland Security notes that, “in most cases, active shooters use firearm(s) and there is no pattern or method to their selection of victims.” The Police Department has limited this definition to include only those cases that spill beyond an intended victim to others.

**Active Shooter** - An individual actively engaged in killing or attempting to kill people in a confined and populated area. Active shooters use firearms, explosives, fire, or other deadly weapons and there is often no pattern of method to their selection of victims.

**Hostage Situation** - A hostage situation begins the moment a suspect takes a person (or some people) under his or her control and subjects that person(s) to the risk of bodily harm for the purpose of furthering a criminal act or facilitating an escape.

The type of police response to an active shooter attack depends on the unique circumstances of the incident. In the event of such an attack, the FS/EAP Director should follow the instructions of the first-responders from the Police Department.

However, active shooter situations by their very nature are unpredictable and the situations evolve quickly. Although the Police Department will immediately respond to this incident upon notification, it may still take 3 to 5 minutes for the Police Department to arrive at the scene, develop and implement their response.

According to a Study of Active Shooter Incidents (2000 – 2013) report prepared by the U.S. Department of Justice, in 64 incidents where the duration of the incident could be ascertained, 23 (35.9%) of 64 incidents ended in 2 minutes or less and 21 (32.8%) of 64 incidents ended in between 2 to 5 minutes. This means even when the Police Department was present or able to respond within minutes, civilians (including FS/EAP staffs) often had to make life and death decisions.
Because active shooter attacks are dynamic events, the Fire Department cannot put forth a set of required actions for private security response to such incidents. However, the Fire Department has compiled a list of recommendations based on booklets developed by the Police Department, U.S. Department of Homeland Security, and U.S. Department of Justice (refer to the Active Shooter Section of the EAP bibliography) for FS/EAP staff to minimize the risks from active shooter attacks. The following recommendations are general guidelines as scoring criteria in the EAP test and to help the FS/EAP Director when it becomes necessary to take immediate action BEFORE the emergency personnel arrive at the scene or provide instructions. It is NOT the purpose to provide unbending, absolute rules for situations in which there are a great many variables. The most appropriate EAP actions may vary depending on the specific active shooter situation which occurs within the context of the event, the building design and components.

10.2 Active shooter emergency

10.2.1 Active shooter outside the building

a. Recommended actions (refer to table 1-3)

(1) Recommended actions for the affected area: in-building relocation.

  ➢ **Reason:**
  If there is shooting emergency happening outside the building, the occupants may be exposed to the threat. The FDNY recommends relocating the occupants to a safe in-building relocation area.

(2) Recommended actions for the rest of the building: shelter in place.

  ➢ **Reason:**
  Since the rest of the building is not affected by the incident, the FS/EAP Director should instruct the occupants to remain in place.

b. Acceptable actions: (refer to table 2-1)

(1) Acceptable actions for the affected area: NA.

(2) Acceptable actions for the rest of the building: in-building relocation.

  ➢ **Reason:**
  There is no urgent need to move the occupants who are not affected by the incident; however, the FDNY accepts (but does not recommend) if the FS/EAP Director chooses to move the occupants to safe in-building relocation areas.

c. Unacceptable actions: (refer to table 3-3)

(1) Unacceptable actions for the affected area: shelter in place, partial or full evacuation (evacuation P/F).

  ➢ **Reason:**
  The occupants who are in the affected area should be moved. The decision made to shelter in place may expose the occupants to the threat.
Evacuating the occupants and exposing them to the outside threat will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat; it may be safer for the occupants to remain inside the building.

(2) Unacceptable actions for the rest of the building: partial or full evacuation (evacuation P/F).

- **Reason:**
  Evacuating the occupants and exposing them to the outside threat will be considered an unacceptable action by the FDNY for this scenario. The FS/EAP Director should direct the occupants to stay away from the threat; it may be safer for the occupants to remain inside the building.

**III. Other special notes:**
All building entrances (including loading dock, garage door, etc.) should be closed to prevent the shooter(s) from entering the building.

10.2.2 Active shooter inside the building

a. Recommended actions (refer to table 1-3)

  (1) **Recommended actions for the WHOLE building:**

If an active shooter event occurs inside your building, as an FS/EAP Director, you may be a victim of the scene. You should react quickly when gunshots are heard and/or when a shooting is witnessed by following one of the Police Department’s three tactics: Run-Hide-Fight (refer to the training section of this booklet). As a civilian, you are not expected to neutralize an active shooter threat. However, you still need to implement the actions that could minimize the injuries of the building occupants.

For example, if an active shooter starts shooting in close proximity of the Fire Command Center, you should secure yourself based on the tactics suggested by the Police Department. You may run away from the lobby, or you may hide in a safe shelter place at that moment. Call 911 as soon as possible, safety permitting. But once you feel it is safe to return the Fire Command Center or designated alternative location, you should return and carry out your responsibilities suggested below.

The following actions are highly recommended by the FDNY upon active shooter events, **IF YOU FEEL IT IS SAFE TO DO SO:**

- Immediately call 911. The call(s) should report (1) any emergency situation and (2) any determination to implement the EAP and which EAP action is being implemented. In addition, if the following information is known, you should also provide them to the 911 operator:
  - Location of the active shooter
  - Number of shooters, if more than one
  - Physical description of shooter/s
• The FS/EAP Director should immediately report to the Fire Command Center. The Fire Command Center should be used for command, communication and control of the emergency. If the Fire Command Center is compromised, if possible try to reach the designated alternative location that could allow you to carry out the following responsibilities. The alternate location should be established as soon as possible.

• Notify the building occupants. If an active shooter situation occurs, the building occupants need to know that there is an active shooter in the building. Depending on the building communication systems, the alert could be delivered via different methods (public announcement system, text, email, etc.). The notification should be a conveyance of information, not an issuance of a command. The alert should indicate there is an active shooter event taking place inside the building and, if possible, tell the occupants where the shooter was last seen. There is much discussion of whether an announcement over the PA system is a prudent decision. Many companies and associations strongly advocate the position that announcements over the PA system is beneficial and will immediately notify all occupants to implement recognized strategies. However, there are critics of this approach since it will alert the active shooter that first responders are alerted. We do not make an official recommendation but immediate notification is critical.

A sample script for an active shooter emergency notification:

“An active shooter has entered the building, he was last seen on 3rd floor of the building. Please implement the active shooter procedures based on your location.”

Federal agencies (e.g. U.S. Department of Health and Human Services, U.S. Department of Homeland Security, U.S. Department of Justice, Federal Bureau of Investigation, Federal Emergency Management Agency) highly recommend the use of plain text/clear language (not code words) to communicate information clearly and effectively. Sending the alert through as many delivery channels as possible is the best way to ensure awareness within the danger zone. The goal is to empower as many individuals as possible with the ability to make an informed decision as to their best option to maximize chances of survival.

In general, the FS/EAP Director should expect all the building occupants will choose one of the 3 survival techniques (Run, Hide or Fight) based on their own condition, location, and environment.
• Notify/consult with the EAP Brigade regarding the implementation of the EAP.

• Assess the Building Components or Systems and take appropriate actions
   **Egress from entrances/exits and stairways**
    The access/egress might be denied or limited based on the active shooter(s) location.
   **Elevator operation**
    Recall all elevators. Determine if it is safe to use elevators. **The use of elevators is not generally recommended during an active shooter event.**
   **Interior door, including fire doors**
    Maintain doors in the closed and unlocked position. Since the use of elevators is restricted, it is the non-fire emergency protocol to **release all fail-safe (electro-magnetic door release) devices (if applicable)** to ensure all re-entry doors are unlocked. However, **every individual emergency may cause variety that may require adjustment for the protocol.**
    If the active shooter is known/seen to be around the stairway, the occupants should be alerted to stay away from the stairway.
   **Evaluate ventilation system operation**
    Take appropriate actions.
   **Evaluate electrical, natural gas, steam and other utility operations**
    All should be assessed.
   **Evaluate fuel oil storage systems and associated pumps and piping**
    All should be assessed.

• **Communications**
   Continue to monitor the emergency.
   Maintain appropriate communication with the building occupants.

b. Acceptable actions (refer to table 2-1): NA.

c. Unacceptable actions (refer to table 3-3): NA.

**10.3 How to respond when law enforcement arrives**

Law enforcement’s purpose is to stop the active shooter as soon as possible. Officers will proceed directly to the area in which the last shots were heard.

• Officers may wear regular patrol uniforms or external bulletproof vests, Kevlar helmets, and other tactical equipment.
• Officers may be armed with rifles and **shotguns in addition to the** handguns.
• Officers may use pepper spray or tear gas to control the situation.
• Officers may shout commands, and may push individuals to the ground for their safety.
As an FS/EAP director, you are required to notify arriving law enforcement personnel and first responders of the nature of the emergency, the information of the building component (e.g. BIC, EAP, and keys/access cards) and the response up to the current time; and comply with the directions of the law enforcement and/or other lawful authority. Remember that the first officers to arrive to the scene will not stop to help injured persons. Expect rescue teams comprised of additional officers and emergency medical personnel to follow the initial responding officers. These rescue teams will treat and remove any injured persons from the areas that have been cleared by the first responding officers. They may also call upon able-bodied individuals to assist in removing the wounded from the premises.

Part IV Knowledge of Training requirements

1 General Instruction of the Training Session
The FS/EAP Directors are required to supervise and train the deputy FS/EAP directors, FS/EAP building evacuation supervisors, FS/EAP floor wardens, deputy EAP floor wardens, EAP searchers, EAP brigade members, critical operation staff and other EAP staff, including conducting initial and periodic refresher training to maintain the state of readiness of such staff. During the first part of the training session, the candidate is required to demonstrate his/her ability to train a staff member as part of the On-Site Exam. The candidate will be required to present an initial training session for one of the following staff members: (1) deputy FS/EAP directors; (2) FS/EAP building evacuation supervisors; (3) FS/EAP floor wardens; (4) deputy EAP floor wardens; (5) EAP brigade members. The staff member will be designated by the inspector upon this test segment.

The second part of the training session is to present an active shooter training session for your building occupants. The candidate will be asked to train the building occupants in case of an active shooter emergency.

2 Training the Eap Staff Members
During this first part of the training segment, the candidate must assume that the inspector is a new employee. This new employee does not have any knowledge of the building. The candidate can only show his/her training knowledge verbally during the On-Site Exam, the candidate must describe any required information specifically and clearly.

Below are two examples; the first is an example of a poorly executed training segment. The second is a properly executed training segment.

For this example we will assume that the staff member being trained must be taught information about the elevator(s) location and floors served.

- Bad example: NO CREDIT
  The candidate said, “I will show you where the elevator lobby is located and which floors each elevator serves.”

- Good example: CREDIT
  The candidate said, “You need to know the location of the elevator lobby. It is located on the right hand side of the front entrance reception desk. The first two elevators serve from the ground floor to the roof and the last elevator serves from basement to the 7th floor.”

The candidate will be given approximately 10-15 minutes to prepare an outline to be used for training. The training should cover 5 basic topics:

1. Designation:
   How many of this specific staff members are required for the building?

2. Qualifications:
In order to serve as an EAP staff member, what is the frequency and length of training that the staff member should receive from the FS/EAP Director?

3. **Duties:**
   List the duties required for the position to be performed in the event of an emergency.

4. **A general overview of the building’s EAP:**
   Explain the building specific details the employee in this position is required to know once the EAP is implemented.

5. **EAP concepts:**
   Discuss the 4 actions (shelter in place, in-building relocation, partial evacuation and full evacuation) of dealing with an emergency as listed in the EAP.

The outline that the candidate prepares in this test segment can be referenced during the On-Site exam; however, if the candidate writes something down but forgets to verbally mention it, the candidate will NOT be given credit for it. The outline will be confiscated (It is to be handed in) at the end of the exam.

**The EAP staffs shall be trained in the performance of their duties in accordance with the EAP plan. The following information only provides a general guideline for training session in the EAP On Site Test.** It is the applicant’s responsibility to become familiar with all the training topics covered in his/her building’s EAP plan, even though such information may not be included in this study guide.

### 2.1 Same information must be learned by all EAP staff members

(1) **A general overview of the building’s EAP:**
   All EAP staff members should know the specific evacuation requirements:
   (a) Locations of exits, stairwells, elevators, primary and alternate exit routes

   (The information could be found in the building Emergency Action Plan, Appendix A, table 7, table 9, and/or the BIC card)

   *Examples of exits: (this is only an example!)*
   - There are two exits in the building, one located at 1st Ave and another one located at Smith street.

   *Examples of stairway: (this is only an example!)*
   - Stairway “A”, southwest corner, floors served: basement to 10th floor.
   - Stairway “B”, east side, floors served: basement to 12th floor.

   *Examples of elevators: (this is only an example!)*
   - Elevator bank “L”, west side, floors served: basement to 12th floor.
   - Elevator bank “M”, southeast side, floors served: ground floor to 12th floor.

   *Example of the primary and alternate exit routes: (this is only an example!)*
   - If partial or full evacuation is implemented, all building occupants should be evacuated through the designated exit routes.
   For ground floor to 12th floor, the primary exit route is stairway “B” and the exit terminates on 1st Ave. The secondary exit route is stairway “A” and the exit terminates on 1st Ave.
   For the basement, the primary exit route is stairway “C” and the exit terminates on Smith street; the secondary exit route is stairway “D” and the exit terminates Smith street.
(b) Locations of assembly areas
(The information could be found in the building Emergency Action Plan, Appendix A, table 10)

*Example: (this is only an example! You should use the information provided in your building’s EAP)
Once the partial or full evacuation is implemented, you should know the primary assembly area which is located on the 2nd Ave between Smith street and John road. You should also know the secondary assembly area which is located on the Queens Ave between John road and Mark place.

(c) Locations of In-building relocation areas
(The information could be found in the building Emergency Action Plan, Appendix A, table 8)

*Example: (this is only an example! You should use the information provided in your building’s EAP)
Once the in-building relocation is implemented, you should know all in-building relocation areas in our building. The in-building relocation areas on all floors including basement are located at the elevator lobby of each floor.

(d) Procedures for accounting for building occupants after competing in-building relocation, partial or full evacuation and the method of communication.
(This information could be found in the Part 4 of the building Emergency Action Plan)

*Example: (this is only an example! You should use the information provided in your building’s EAP)
You should know the procedures for accounting for employees present in the building and taking a head count at the in-building relocation area or the assembly area.

After implementation of an in-building relocation, the responsible staff assigned by the EAP (such as FS/EAP Wardens) should take a head count at the relocation area. For any occupant not accounted for, a list of the names and last known locations shall immediately be established. The responsible staff should call to the fire command station via the fire warden phone to report if all the floor occupants are in the relocation area and to report the number of occupants in the area.

After completing a partial or full evacuation, the responsible staff assigned by the EAP (such as FS/EAP Wardens) should take a head count at the assembly area. For any occupant not accounted for, a list of the names and last known locations shall immediately be established. The staff should call the EAP Director via cell phone to report. In an evacuation, do not return to the building. All building occupants should remain with their group unless otherwise instructed.

(2) Four EAP actions:
Discuss the 4 actions (shelter in place, in-building relocation, partial evacuation and full evacuation) of dealing with an emergency as listed in the EAP.
2.2 **Different training content for different EAP staff members**

**I. Deputy FS/EAP directors;**

(1) **Designation:**
There must be one or more employees designated as a Deputy FS/EAP director by the owner as qualified.

(2) **Qualifications:**
The deputy fire safety/EAP director shall hold a fire safety/EAP director certificate of fitness. The deputy fire safety/EAP director shall receive training in the emergency action plan from the fire safety/EAP director.

(3) **Duties and responsibilities.**
The deputy fire safety/EAP director shall:

(a) in the absence of the fire safety/EAP director, perform the duties of the fire safety/EAP director, as circumstances warrant, except that the fire safety/EAP director shall personally supervise all FSP staff training;

(b) in the presence of the fire safety/EAP director, assist the fire safety/EAP director in carrying out the requirements of the fire safety and evacuation plan and this section, as circumstances warrant;

(c) be fully familiar with the provisions of the Emergency Action Plan;

(d) ensure notices identifying the FSP Staff shall be conspicuously posted on each floor, and kept at the fire command center, where they shall be made available for inspection by Department representatives.

(e) ensure the proper record keeping is maintained

(f) be responsible for a daily check of the availability of EAP wardens and deputy EAP wardens, and make such notifications or temporary assignments as are necessary to ensure adequate EAP staffing;

(g) in the event of an emergency in or affecting the building,

- immediately report to 911 to report (1) any emergency situation and (2) any determination to implement the EAP and which EAP action is being implemented.
- report to the fire command center or designated alternative location
- implement the emergency action plan, if appropriate
- notify arriving emergency response personnel and incident commander of the emergency and the building response thereto;
- be responsible for communicating all information and directions to building occupants to implement the fire safety and evacuation plan;

**II. EAP building evacuation supervisor**

(1) **Designation:**
There must be at least one person as a EAP building evacuation supervisor, and qualified to serve in such position, shall be present and on duty in the building at all times when a fire safety/EAP director is not required to be on duty, but there are occupants in the building. The EAP building evacuation supervisor at such times shall exercise the authority and responsibility of the fire safety/EAP director to implement the emergency action plan.
(2) Qualifications:
The EAP building evacuation supervisor shall receive training in the emergency action plan from the fire safety/EAP director.

(3) Duties and responsibilities.
The FS/EAP building evacuation supervisor shall:
(a) in the absence of the fire safety/EAP director and deputy fire safety/EAP director, perform the duties of the fire safety/EAP director, as circumstances warrant, except that the fire safety/EAP director shall personally supervise all FSP staff training;
(b) in the presence of the fire safety/EAP director, assist the fire safety/EAP director in carrying out the requirements of the fire safety and evacuation plan and this section, as circumstances warrant;
(c) be fully familiar with the provisions of the Emergency Action Plan;
(d) ensure notices identifying the FSP Staff shall be conspicuously posted on each floor, and kept at the fire command center, where they shall be made available for inspection by Department representatives.
(e) ensure the proper record keeping is maintained
(f) be responsible for a daily check of the availability of EAP wardens and deputy EAP wardens, and make such notifications or temporary assignments as are necessary to ensure adequate EAP staffing.
(g) in the event of an emergency in or affecting the building,
   i. immediately report to 911 to report (1) any emergency situation and (2) any determination to implement the EAP and which EAP action is being implemented.
   ii. report to the fire command center or designated alternative location
   iii. implement the emergency action plan, if appropriate
   iv. notify arriving emergency response personnel and incident commander of the emergency and the building response thereto;
   v. be responsible for communicating all information and directions to building occupants to implement the fire safety and evacuation plan;

III. EAP wardens
(1) Designation:
There must be at least one EAP warden for each floor of the building. EAP wardens shall be on duty on each floor during regular business hours for such floor.

(2) Qualifications:
The EAP warden shall receive training in the emergency action plan from the fire safety/EAP director.

(3) Duties and responsibilities.

(a) be fully familiar with the provisions of the Emergency Action Plan;
(b) in the event of an emergency on the floor or immediately affecting building occupants on the floor, notify the fire safety/EAP director and building occupants on the floor of the emergency, and initiate appropriate action;
(c) in the event of an emergency not on the floor or not immediately affecting building occupants on the floor, establish communication with the fire safety/EAP director and, if possible, await direction from the fire safety/EAP director;
(d) keep the fire safety/EAP director informed of his or her location and the progress of
the implementation of emergency action plan measures;
(e) confirm the in-building relocation or evacuation of the floor or portion thereof by
directing deputy EAP wardens and/or other EAP staff designated as EAP searchers to
search all areas of the floor to be relocated in building or evacuated; to do so by
visual inspection, not merely by the lack of a voice response; and to notify any
remaining building occupants that they must immediately comply with the applicable
emergency action plan procedures;
(f) determine whether the stairwells are safe to enter before directing building occupants
to use them, and, if unsafe, notify the fire safety/EAP director, and to instruct
building occupants not to use
(g) perform such other duties as set forth in the fire safety and evacuation plan, or as
directed to do so by the fire safety/EAP director.

IV. Deputy EAP wardens

(1) Designation:
There must be at least at least one deputy EAP warden for each employer of building
occupants on a floor. If the floor area occupied by an employer of building occupants on a
single floor exceeds 7,500 square feet, a deputy EAP warden shall be designated for each
7,500 square feet or portion thereof. At least the minimum required number of deputy EAP
wardens shall be on duty on each floor during the regular business hours of such employer.

(2) Qualifications:
The deputy EAP warden shall receive training in the emergency action plan from the fire
safety/EAP director

(3) Duties and responsibilities.
The deputy FS/EAP floor wardens shall:
(a) be fully familiar with the provisions of the Emergency Action Plan;
(b) in the absence of the EAP warden, perform the duties of the EAP warden, as
circumstances warrant;
   • in the event of an emergency on the floor or immediately affecting building
     occupants on the floor, notify the fire safety/EAP director and building occupants
     on the floor of the emergency, and initiate appropriate action;
   • in the event of an emergency not on the floor or not immediately affecting
     building occupants on the floor, establish communication with the fire
     safety/EAP director and, if possible, await direction from the fire safety/EAP
     director;
(c) in the presence of the EAP warden, assist the EAP warden in carrying out the
requirements of the emergency action plan and this section, by searching all areas of
the floor to be relocated in building or evacuated, and notifying any remaining
building occupants that they must immediately comply with the applicable
emergency action plan procedures, and by performing such other duties as assigned
by the emergency action plan or directed by the EAP warden.
V. **EAP brigade members**

(1) **Designation:**
The EAP brigade shall consist of the building manager, chief engineer and director of security (or, in their absence, qualified designees), and other building personnel, office employees or other building occupants designated to assist in the implementation of the emergency action plan, including persons assigned to assist building occupants that require assistance to participate in the plan. EAP brigade members shall be on duty during regular business hours. The fire safety/EAP director and deputy fire safety/EAP directors shall not be designated as EAP brigade members;

(2) **Qualifications:**
All EAP brigade members shall receive training in the emergency action plan from the fire safety/EAP director

(3) **Duties and responsibilities.**
(a) perform their designated assignments, as set forth in the emergency action plan or as directed by the fire safety/EAP director; and
(b) in the event of an emergency, immediately report to the designated locations, as set forth in the emergency action plan or directed by the fire safety/EAP director, to be ready to undertake their designated assignments.

3 **Preparation and Training for an Active Shooter Situation**

Active shooter situations by their very nature are unpredictable and the situations evolve quickly. The Fire Department developed these recommendations based on analysis of past active shooter incidents and careful review of previous studies. Unlike other guides on active shooter attacks, this guide provides recommendations tailored to FS/EAP Directors. Based on the booklet developed by the Police Department (refer to the Active Shooter Section of the EAP bibliography), the FS/EAP Director should prepare his/her building and/or building occupants for the following three domains: procedures, systems, and training.

A. **Procedures:**
- Conduct a realistic security assessment to determine the facility’s vulnerability to an active shooter attack.
- Identify multiple evacuation routes and practice evacuations under varying conditions; post evacuation routes in conspicuous locations throughout the facility; ensure that evacuation routes account for individuals with special needs and disabilities.
- Designate a shelter location that provides an area with ballistic cover, not just visual concealment. The ideal shelter locations should have thick walls, solid doors with locks, minimal interior windows, first-aid emergency kits, communication devices, and duress alarms.
- Designate a point-of-contact with knowledge of the facility’s security procedures and floor plan to liaise with police and other emergency agencies in the event of an active shooter situation.
- Incorporate an active shooter drill into the building’s emergency preparedness procedures.
- Vary security guards’ patrols and patterns of operation.
• Prepare a “Go Bag” gathering building floor plans, Building Information Card, access cards and keys. The “Go Bag” should be placed in the Fire Command Center, but limit access to the FS/EAP staffs, building responsible personnel and the first responders. Because the FS/EAP Director might not be able to stay at the Fire Command Center to carry out his/her responsibilities while active shooter emergency occurs, a Go Bag that is sturdy and easy to carry is needed in a hasty evacuation.

• Establish a central command station (such as Fire Command Center) for building security.

B. Systems:
• Ensure credential-based access control systems are in place that provide accurate attendance reporting, limit unauthorized entry, and do not impede emergency egress.
• Ensure closed-circuit television systems are in place that provide domain awareness of the entire facility and its perimeter; ensure that video feeds are viewable from a central command station.
• Ensure communications infrastructure are in place that allows for facility-wide, real-time messaging.
• Ensure elevator systems are in place that may be controlled or locked down from a central command station.

C. Training:

This training section should be addressed if you are assigned to present an active shooter training during the EAP On-Site test.

• The most important concept to share with the building occupants is the survival techniques to use when an active shooter is in their vicinity: Run, Hide, Fight.

1. RUN
   If there is an accessible escape path, attempt to evacuate the premises.
   Be sure to discuss with the occupants the following issues:
   o Have an escape route and plan in mind.
   o Visualize the entire escape route before beginning to move, and avoid using elevators or escalators.
   o Evacuate regardless of whether others agree to follow.
   o Leave your belongings behind.
   o Help others escape, if possible.
   o Prevent individuals from entering an area where the active shooter may be.
   o Keep your hands visible, fingers spread apart.
   o Follow the instructions of any police officers.
   o Do not attempt to move wounded people.
   o Call 911 when you are safe.

2. HIDE
   If evacuation isn’t an option, find a place to hide where the active shooter is less likely to find you.
Be sure to discuss with the occupants: (1) ideal hiding place; and (2) what they should do when they hide

- Ideal hiding place should be an area with ballistic cover, not just visual concealment:
  - Concealment: is something that will block you from the view of the gunman. Soft wall cubicles and desks may conceal but provide no substantial ballistic protection.
  - Cover: is something of substantial thickness and weight that will stop a bullet. Inside, office furniture and equipment such as vending machines, copy machines, and file cabinets can stop many types of bullets.

Your hiding place should:
- Be out of the active shooter’s view.
- Provide protection if shots are fired in your direction (i.e., an office with a closed and locked door).
- Not trap or restrict your options for movement.

- When you hide, you should:
  - Lock the door, if applicable.
  - Blockade the entrance with heavy furniture, if applicable.
  - Silence, not vibrate, your cell phone, pager and/or any other electronic devices.
  - Turn off any source of noise (i.e., radios, televisions).
  - Hide behind large items (i.e., file cabinets, copy machine, soda machine).
  - Remain quiet.

3. **FIGHT**

If evacuation and hiding out are not possible, as a last resort, and only when your life is in imminent danger, attempt to disrupt and/or incapacitate the active shooter:
- Act as aggressively as possible against him/her.
- Throw items and improvise weapons.
- Yell.
- Commit to your actions.

- Train Building occupants to call 911 as soon as it is safe to do so. Information to provide to law enforcement or 911 operator:
  - Location of the active shooter.
  - Number of shooters, if more than one.
  - Physical description of shooter/s.
  - Number and type of weapons held by the shooter/s.
  - Number of potential victims at the location.

  If you cannot speak, leave the line open and allow the dispatcher to listen.

- Train building occupants on how to respond when law enforcement arrives on scene:
  - Follow all official instructions.
- Remain calm.
- Immediately raise hands and spread fingers, keep hands empty (put down any items in your hands) and visible at all times,
- Avoid making sudden or alarming movements such as holding on to them for safety.
- Avoid pointing, screaming and/or yelling.
- Do not interfere with responding officers: Do not stop to ask officers for help or direction when evacuating. Just proceed in the direction from which officers are entering the premises.
- Remember that the first officers to arrive to the scene will not stop to help injured persons. Expect rescue teams comprised of additional officers and emergency medical personnel to follow the initial responding officers. These rescue teams will treat and remove any injured persons from the areas that have been cleared by the first responding officers. They may also call upon able-bodied individuals to assist in removing the wounded from the premises.

Focus on teaching building occupants a few basic concepts, actions, and make sure they perform them well. In sum, after training, the building occupants should know the following three topics:

1. **Survival techniques**
   - Discuss the 3 survival techniques when an active shooter is in their vicinity. Describe the detail, such as how to choose the techniques, how to apply the techniques, and what should be considered when you apply a specific technique.

2. **Information for 911 operators**
   - Discuss what information should be provided to the 911 operators.

3. **How to respond when law enforcement arrives on scene**
   - Inform the occupants what to expect when law enforcement arrives on scene as they work to stop an active shooter and eliminate the threat.

All employees can help prevent and prepare for potential active shooter situations. There are many training course offered by the law enforcement agencies (NYPD, FEMA, etc.) that provide guidance to individuals, including managers and employees, so that they can prepare to respond to an active shooter situation. For example, NYPD SHIELD addresses private sector business on both an industry-specific and a geographic basis. This enables the NYPD to best serve the unique needs of each constituency. NYPD provides training services to assist public and private sector entities in defending against terrorism including active shooter. In addition, different active shooter training courses are also provided by the Federal Law Enforcement Training Centers (FLETC), the detail is addressed in the following link: [http://www.dhs.gov/active-shooter-preparedness](http://www.dhs.gov/active-shooter-preparedness)

Your human resources department and facility managers should engage in planning for active shooter scenario. FDNY strongly recommends all FS/EAP Directors to discuss with the human resources department and facility managers about the various free programs offered by the NYPD Shield and NYS FEMA with regard to active shooter related training. The local law enforcement could help you to plan and conduct the training exercises based on your building components.
Appendix I. Official Bibliography (Computer Based Exam and On-Site Exam)

The FDNY has provided all recognized EAP schools with the official bibliography to better prepare applicants for the course and examination. We encourage all applicants to visit the links before attending any school.

You may read this document but cannot link or access it directly from this document.

1. You can copy it to document file and then link directly to the sites.
2. You can type the exact citation in a search engine and then visit the sites.

FINAL EAPD Curriculum Bibliography 11/30/14

1. Rule 6-02
   - Office Building Emergency Action Plans, 3 RCNY 6-02

2. Different Building Evacuation Concepts, including: Sheltering in Place, In-Building Relocation, Partial Building Evacuation, and Full Building Evacuation.

3. Building Communications and Announcements

4. Building Ventilation Options
5. Use of Elevators in Non-Fire Emergencies

6. Human Services and the Handling of Building Occupants with Special Needs during Non-Fire Emergencies

7. WMD’s, including Dirty Bombs, and Other Radiological Agents

8. Hazardous Material Incidents Involving Biological Agents and Contamination Issues

9. Hazardous Material Incidents Involving Chemical Agents

10. Bombs, Bombs Threats and Suspicious Packages

11. Weather-Related Emergencies

12. Building Utilities Failures, including mechanical and Telecommunication Systems
   o “Building Failure Cases.” Wikispaces. NEW 11/26/2014

13. Training Methods

14. Civil Disturbances/Criminal acts/ Emotionally Disturbed Persons

15. NIMS and Emergency Response Operations
