

## COMPUTER SCIENCE AND INFORMATION SECURITY MAJOR CHECKLIST

**Description.** The major in Computer Science and Information Security offers the computing, quantitative and analytical expertise public and private organizations need to advance the practice of digital forensics and cybersecurity. The program provides the foundational background in computing that is needed to thwart the abuse and misuse of computers, data networks, information systems and information infrastructures, in the environment of ever advancing digital technology. The courses in the Computer Science and Information Security major prepare students for direct entry into the profession as well as entry into graduate and professional programs that rely on computing and quantitative methods, especially in areas related to digital forensics and cybersecurity.

**Prerequisites.** MAT 105 and MAT 141 (does not count towards the 58-59 credits required for the major) are prerequisites for the required calculus sequence in the CSCI major.
